COURSE GUIDE & SYLLABUS · ADULTS (18+) · AGES 18–65

AI at Work (Professional) Beginner: AI at Work, Made Simple

No jargon, no coding: use ChatGPT, Claude, Gemini, Copilot, NotebookLM, Perplexity and Canva for real work, safely.

A hands-on first course in AI for working adults: shop owners, teachers, office executives, sales reps, accountants' assistants and anyone who writes, reads, calculates or presents at work. Every term is explained in everyday words with Indian workplace examples, and every lesson is done live in real, free AI tools, with the same task tried in two or three tools so you are never tied to one. Module 1 makes AI your everyday assistant: polite emails and WhatsApp replies, the 4-part prompt, summaries of long documents, meeting action items, and spreadsheets with formulas and checked totals. Module 2 is about creating, researching and automating: slide decks and posters, research with sources you check yourself, your own FAQ assistant, and a capstone where you turn one weekly task into a faster AI routine and measure the time saved. Each lesson has a short video, a follow-along, Prompt Lab practice with instant feedback, workplace games, a project kit and a teacher demo script.

What learners will be able to do

- Explain in plain words what an AI chatbot is, what it is good at, and why it can be wrong
- Use ChatGPT, Claude, Gemini and Copilot safely, without pasting passwords, ID numbers or client data
- Write clear prompts with Role, Task, Context and Format, and improve answers with follow-ups
- Draft emails, WhatsApp replies and notices in English and Hindi, and check their meaning
- Summarise long documents and ask questions of them in Claude, ChatGPT and NotebookLM, checking against the original
- Turn meeting notes into action items with owners and deadlines
- Clean a spreadsheet, get formulas like SUMIF, XLOOKUP and IF from plain words, and verify totals
- Build a 6-slide deck and a social post with AI, on-brand and honestly labelled
- Research with Perplexity, Gemini and ChatGPT search, open every source, and spot made-up or old information
- Set up and test a custom FAQ assistant (Claude Projects, ChatGPT GPTs/Projects or Gemini Gems)
- Redesign one weekly task as an AI routine with human checks, and measure the time saved
- Write a responsible-use checklist for your own workplace

How every lesson works

Watch	A short animated explainer video with captions and read-aloud narration.
Learn	Learn cards in plain language, then a step-by-step walkthrough of the real AI tool.

Prompt Lab	Learners write prompts for real tasks and get instant checklist feedback, then copy them into the AI tool and judge the result.
Quick checks	Sorting, ordering and choice questions with instant feedback (spot the hallucination, safe or unsafe, better prompt).
Probe	Apply the skill to a new situation and explain your thinking.
Projects	Every lesson produces something real you keep: a prompt library, a poster, a summary, an assistant. Module projects are reviewed with a rubric.
Printables	Worksheet for every lesson, project brief for every project, project kits (prompt templates) and a teacher lesson plan with answer keys.

Scope and sequence

#	Lesson	Big idea	Learners build
1	**AI in Plain Words: Your First AI Assistant** Understand what an AI chatbot is (and is not), set up free accounts safely, and turn a rough note into a polite email you would actually send.	Chatbots, safely	Build your AI starter kit
2	**Ask Better, Get Better: The 4-Part Prompt** Write clear prompts with a Role, Task, Context and Format, improve replies with follow-ups, and build a library of 10 prompts for your own job.	Role, Task, Context, Format	Build your prompt library
3	**Documents and Meetings: Summarise, Ask, Check** Use AI to summarise a long document, turn meeting notes into action items with owners and dates, ask questions of a document, and check every answer against the original.	Summaries you can trust	Make a one-page brief from a long document
4	**Project: Spreadsheets with AI** Use AI to understand and clean a sales sheet, write formulas like SUMIF, XLOOKUP and IF, build a summary and chart, and verify every total yourself.	Data, formulas, checks	Project: Analyse the monthly sales sheet with AI
5	**Presentations and Visuals with AI** Outline a talk with AI, turn it into a 6-slide deck in Canva, PowerPoint or Google Slides, make a poster or social post image, keep it on-brand, and label AI images honestly.	Outline, slides, images	Make a 6-slide deck and one post for your work
6	**Research You Can Trust** Research a work question with AI search tools that show sources, open and check every source, spot made-up or old information, compare two tools, and write a fact-checked one-page note.	Sources and fact-checks	Write a fact-checked one-page note

7	**Your Own Custom AI Assistant** Set up a custom AI assistant for your business or department with clear instructions and reference files, then test it with tricky questions and keep a test log.	Instructions + files	Build an FAQ assistant for your business or department
8	**Capstone: Automate One Weekly Task** Pick one weekly task, design a repeatable AI routine with human checks and templates, measure the time saved, and present a 3-minute demo with a responsible-use checklist for your workplace.	Your AI routine	Project: Automate one weekly task with AI

Modules

Module 1 · Your AI assistant for everyday work
What AI is in plain words, safe setup, the 4-part prompt, documents and meetings, and spreadsheets with checked totals. Project: analyse a monthly sales sheet.

Big question: How can an AI assistant save me time every day without putting my work or my customers at risk?

Module 2 · Create, research and automate
Slides and visuals, research with sources you check, your own FAQ assistant, and a capstone that turns one weekly task into a faster AI routine.

Big question: How do I use AI to create, find out and repeat my work faster, while I stay in charge of quality and honesty?

Assessment

Prompt Lab tasks give instant checklist feedback. Quick checks give instant feedback. Written answers and projects are reviewed by the teacher against 4-level rubrics (Beginning · Developing · Secure · Excellent).

What you need

- A laptop or smartphone with a modern browser (a laptop is easier for lessons 3–5)
- Free accounts (learners are adults): ChatGPT, Claude (18+), Gemini, Microsoft Copilot, NotebookLM, Perplexity and Canva — at least two chatbots ready for every class
- Excel or Google Sheets (free with a Google account) for lesson 4
- PowerPoint or Google Slides, or Canva, for lesson 5
- The Kitabash Prompt Lab (built into each lesson) and the downloadable project kits and practice files

Before you start

- None. If you can send an email or a WhatsApp message, you are ready.
- Learners must be 18 or older (Claude requires 18+).

Safety and privacy

Privacy rule in every lesson: never paste passwords, OTPs, Aadhaar, PAN, bank or card details, or anyone’s personal details into an AI tool, and never put confidential company or client data into a personal AI account; use placeholders like [Client name] and company-approved tools for confidential work. AI can make mistakes (hallucinations), so every lesson includes checking facts, numbers, dates and promises against the original. Honest use: label AI-made images and documents, no fake reviews, no fake endorsements, and no deepfakes of real people. Learners are adults (18+).

What comes next

After this course: **AI at Work · Level 2 (automations, AI agents, role tracks for business owners, teachers, sales, HR and office teams)**.

Kitabash original curriculum. Product names (ChatGPT, Gemini, Claude, Copilot, Canva, NotebookLM, Perplexity, Teachable Machine) belong to their owners; Kitabash is not affiliated with or endorsed by them. Tools and age rules change: check each tool’s current terms before class.
