Lesson 4: Project: Spreadsheets with AI

Module 1 | 60 minutes | Data, formulas, checks | Adults (18+) · ages 18–65

Name: _____ Class: _____ Date: _____

Plan your project and practise the key ideas.

1. Key words

Match each word to what it means. Write the letter.

a. CSV file ___ A. Finds a value in another table, like a product's price.
b. formula ___ B. Adds up only the rows that match a condition, like one region.
c. SUMIF ___ C. An instruction in a cell that calculates something, starting with =.
d. XLOOKUP / VLOOKUP ___ D. A simple spreadsheet file (comma-separated values) that Excel, Google Sheets and AI tools can open.

2. Prompt Lab: ask for a formula

You have the sales sheet open in Excel or Google Sheets. Write a prompt asking the AI for a formula that adds up revenue for one category only (Category is in column G, Revenue in column J). Name your app, describe the columns, say what you want, and ask for a simple explanation. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

3. Look at monthly_sales.csv. Does this need cleaning before you add up revenue?

Write each item in the right group: Needs cleaning / Fine as it is.

a. INV-2431 appears twice → _____
b. "bangalore" is spelt differently from "Bengaluru" → _____
c. INV-2426 has no units and no revenue → _____
d. Prices are written without the ₹ sign → _____
e. Dates are written like 2026-09-01 → _____
f. Several sales happened on the same day → _____

4. Match each formula to the job it does

Draw a line from each word to its match.

a. SUMIF ..... A. Count how many invoices came from Pune
b. XLOOKUP or VLOOKUP ..... B. Show “Target met” when a sale is above ₹20,000
c. IF ..... C. Find a product’s price from another table
d. COUNTIF ..... D. Add up revenue only for the South region

5. Which total do you trust?

The AI says September revenue is ₹5,42,691. Your own SUM on the cleaned sheet says ₹5,23,971. What should you do? Circle one.

a. A. Use the AI’s number; AI is good at maths
b. B. Find the difference (₹18,720), see it is the duplicate invoice, and use your checked total
c. C. Average the two numbers
d. D. Leave the total out of the report

6. My plan

Plan your project: Use AI to understand, clean and analyse a September sales sheet for a home-goods distributor, then produce a checked one-page summary with formulas, a chart and three insights for your manager. Sketch it and list what each part will do.

7. Checklist

Tick each one when your project does it.

a. ☐ Data problems found and fixed (duplicate, spelling, blank row), with a note of each change
b. ☐ Three or more formulas used (SUMIF, IF, and XLOOKUP/VLOOKUP or COUNTIF), each explained in one line
c. ☐ Summary table of revenue by region and by category
d. ☐ One clear chart with a title
e. ☐ Verification note comparing the AI's totals with your own
f. ☐ Three checked insights in plain words, and a line naming the AI tools used

8. Two stars and a wish

Ask a friend to test your project. Write two things they liked and one idea to improve it.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can ask AI to explain a sheet and list data problems.

☐ I can get and use formulas like SUMIF, IF and XLOOKUP from a plain-words request.

☐ I can make a summary table and a chart.

☐ I can verify AI totals with my own formulas and explain any difference.
