Lesson 5: Presentations and Visuals with AI

Module 2 | 60 minutes | Outline, slides, images | Adults (18+) · ages 18–65

Objective: Outline a talk with AI, turn it into a 6-slide deck in Canva, PowerPoint or Google Slides, make a poster or social post image, keep it on-brand, and label AI images honestly.

Success criteria

- I can get a slide outline with titles, points and speaker notes from AI.
- I can build a 6-slide deck in Canva, PowerPoint or Google Slides.
- I can write an image prompt and add text myself.
- I can keep slides on-brand and label AI images honestly.

Key vocabulary

- **outline**: The plan of a talk: slide titles and main points, before any design.
- **speaker notes**: What you will say for each slide, written under it.
- **brand kit**: Your fixed colours, fonts and logo used on everything.
- **image prompt**: A description you type to get an AI-made picture: subject, style, colours, size.
- **AI label**: A small note like “Image made with AI” so viewers are not misled.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Project files: l05_slides_and_visuals_kit.md, l05_teacher_demo_script.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	“Spot the brand” team game (see Unplugged).
4 min	**Watch**	Play the lesson video. Pause at the misspelt poster: “Who spotted it before I paused?” show of hands.
7 min	**Live demo**	Outline in a chatbot, slides in Canva, the PowerPoint/Slides route, an image with and without text, AI label.
6 min	**Prompt Lab 1**	Prompt Lab: a 6-slide outline for the learner’s own work. Run it in one chatbot.
12 min	**Build along**	Build slides from the outline, apply brand colours and fonts. Teacher circulates and helps with Canva.

6 min	**Prompt Lab 2**	Prompt Lab: a poster image. Make it in Gemini, Copilot, ChatGPT or Canva, then add the words in Canva.
5 min	**Quick competition**	“Okay to post or not?” sort and “Spot the mistake: the poster”, played as a race in teams.
7 min	**Gallery show-and-tell**	Learners share one slide and their post; class votes (emoji reactions) for “most on-brand” and “best image prompt”.
5 min	**Probe**	From idea to deck (order) and New situation: messy slides (individual).
3 min	**Wrap-up**	Exit ticket and homework.

Unplugged warm-up

Spot the brand (5 min): show (or describe) 4 well-known Indian shop boards or packaging colours without names and let teams guess the brand. Then ask: “Why did you recognise them so fast?” Same colours, same fonts, every time. That is what we will do for our slides.

Teaching the idea

AI is a great first-draft partner for slides and visuals. Teach a clear order: outline first (a chatbot gives slide titles, points and speaker notes), then build slides (Canva’s AI design option, or paste into PowerPoint or Google Slides), then brand (same colours, fonts, logo), then images (from a description, with no text, words added in Canva), then honesty (label AI images; never fake people, reviews or products). Show that AI image tools misspell words, and that a good designer adds text separately. Note that some AI features are limited on free plans and menus change, so describe what to look for, not exact button names.

Analogy: AI is like a quick sketch artist: it gives you a rough draft of the slides and pictures in minutes, and you are the art director who decides what is right for your brand.

Live demo: 1) In ChatGPT (or Claude or Gemini), type the 6-slide outline prompt from the video and read the outline aloud. Ask the class: “Anything wrong for a real shop?” 2) Copy the outline into Canva’s AI design option (or a Canva presentation template), pick a design, and change colours to two brand colours. 3) Show the PowerPoint or Google Slides route quickly: one slide per title, paste points, design suggestions. 4) In Copilot or Gemini, make a Diwali post image with the words “Diwali Sale”, zoom in on the text, then remake it with “no text” and add the words in Canva. 5) Add “Image made with AI” in small text.

Questions to ask

Ask	Listen for
Why outline before designing?	The story and facts must be right first; design is easier once the outline is clear.
What four things go in an image prompt?	Subject, style, colours, and shape or size.

Why ask for no text in an AI image?	Image tools often misspell words; add text yourself in Canva.
What makes slides look on-brand?	The same few colours, fonts and logo on every slide.
When must you label an image as AI-made?	Whenever you share or publish it, so people are not misled.

Differentiation

Support
Give a ready outline for learners who are slow typists; they focus on building slides in Canva. Pair learners new to Canva with confident ones.

Stretch
Ask the AI to turn the deck into a 30-second reel script and a WhatsApp broadcast message, keeping the same brand words.

Common misconceptions

Misconception	How to fix it
The AI design is finished, so I can present it as it is.	Read every slide, fix facts, and make it match your brand.
AI images are free to use any way I like.	Never fake real people, reviews or products; label AI images.
AI images can write text perfectly.	They often misspell. Ask for no text and add words yourself.
More colours and fonts look more creative.	Two or three colours and one or two fonts look professional.

Assessment

Use the Prompt Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
Write one rule you will follow when you use AI images for your work.

Homework
Finish your 6-slide deck and one post image for a real work need. Present it to one colleague or family member and note one improvement.

Answer key — Kitabash activities

1. Prompt Lab: a 6-slide outline (perform · ai lab)

Checklist: Role for the AI · Number of slides · Who the audience is · What each slide contains · Length of the talk

Strong example:

```
You are a training coordinator. Make a 6-slide outline for a 10-minute talk to our shop staff on serving customers well in the Diwali rush. For each slide give a title, 3 short bullet points and one line of speaker notes.
```

2. Prompt Lab: a poster image (perform · ai lab)

Checklist: The subject (what is in the picture) · A style · Colours · No text in the image · Shape or size

Strong example:

```
Create a square image for an Instagram post about our school's science fair: children's hands building a model volcano and a small robot on a table, flat illustration style, bright blue and yellow colours, a clean empty space at the top. No text or words in the image.
```

3. Okay to post for your business, or not? (perform · categorize)

Fine to use: An AI-made Diwali background for your sale post, labelled "Image made with AI", Slides with an AI-written outline that you checked and edited, An AI icon of a delivery van for your "Free delivery" slide
Not okay: An AI image of a famous cricketer holding your product, An AI "photo" of a dish that looks much better than what you actually serve, A made-up "customer review" image to put on your page

4. From idea to deck (perform · ordering)

Order: Ask AI for a 6-slide outline → Check facts and fix the order → Build slides in Canva, PowerPoint or Google Slides → Apply brand colours, fonts and logo → Add images and label AI-made ones → Rehearse using the speaker notes

5. Spot the mistake: the poster (perform · multiple choice)

Answer: Make the image again with "no text", then add the words yourself in Canva

6. New situation: messy slides (probe · multiple choice)

Answer: Use the same 2–3 colours, 1–2 fonts and the school logo on every slide

Answer key — worksheet

1. **Key words:** outline = The plan of a talk: slide titles and main points, before any design. · speaker notes = What you will say for each slide, written under it. · brand kit = Your fixed colours, fonts and logo used on everything. · image prompt = A description you type to get an AI-made picture: subject, style, colours, size.
2. **Prompt Lab: a 6-slide outline:** Include: Role for the AI; Number of slides; Who the audience is; What each slide contains; Length of the talk. Example: You are a training coordinator. Make a 6-slide outline for a 10-minute talk to our shop staff on serving customers well in the Diwali rush. For each slide give a title, 3 short bullet points and one line of speaker notes.
3. **Prompt Lab: a poster image:** Include: The subject (what is in the picture); A style; Colours; No text in the image; Shape or size. Example: Create a square image for an Instagram post about our school's science fair: children's hands building a model volcano and a small robot on a table, flat illustration style, bright blue and yellow colours, a clean empty space at the top. No text or words in the image.
4. **Okay to post for your business, or not?:** Fine to use: An AI-made Diwali background for your sale post, labelled "Image made with AI", Slides with an AI-written outline that you checked and edited, An AI icon of a delivery van for your "Free delivery" slide · Not okay: An AI image of a famous cricketer holding your product, An AI "photo" of a dish that looks much better than what you actually serve, A made-up "customer review" image to put on your page
5. **From idea to deck:** 1 Ask AI for a 6-slide outline · 2 Check facts and fix the order · 3 Build slides in Canva, PowerPoint or Google Slides · 4 Apply brand colours, fonts and logo · 5 Add images and label AI-made ones · 6 Rehearse using the speaker notes
