Lesson 8: Capstone: Automate One Weekly Task

Module 2 | 60 minutes | Your AI routine | Adults (18+) · ages 18–65

Objective: Pick one weekly task, design a repeatable AI routine with human checks and templates, measure the time saved, and present a 3-minute demo with a responsible-use checklist for your workplace.

Success criteria

- I can map a weekly task and time each step.
- I can design a routine with AI steps and human checks.
- I can make templates and a routine card that I reuse.
- I can measure time saved honestly and present a demo with a responsible-use checklist.

Key vocabulary

- **workflow / routine**: The steps you follow to finish a task, in order.
- **automate**: Make a task faster and repeatable with tools; in this course, AI drafts and you check.
- **human check**: A step where a person reviews, decides or approves before anything moves on.
- **template**: A saved prompt, document or sheet you reuse every week.
- **time saved**: Before time minus after time, including checking.
- **responsible use**: Using AI with privacy, checking, honesty and approval from the right people.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Printed project brief
- Project files: l08_capstone_kit.md, l08_teacher_demo_and_marking.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	“Time thieves” sticky-note sort and vote (see Unplugged).
4 min	**Watch**	Play the project video. Poll: “How many minutes a week do you spend on your most boring task?” (type a number in chat).
5 min	**Live demo**	Task map, Claude routine table (catch the risky tip), weekly template, time saved, model 3-minute demo.

6 min	**Game: AI or human?**	“AI step or human step?” sort and “Honest time saved”, played as a quick competition.
6 min	**Prompt Lab**	Prompt Lab: design your AI routine for the learner’s own task.
14 min	**Capstone build (pairs)**	Build-along steps: templates, routine card, run it with practice data, time it. Partners check each other’s privacy steps.
14 min	**Demo day**	Show-and-tell: 3-minute demos in breakout rooms of four, with a timer. Peers give two stars and a wish; each room picks one demo to show everyone.
6 min	**Probe and submit**	New situation: the appraisal forms, the capstone path (order), then submit the capstone with the reflection and checklist.

Unplugged warm-up

Time thieves (5 min): everyone writes their three most boring weekly tasks on sticky notes (or in the chat) with the minutes each takes. Group them on a board: reports, messages, notices, data entry. Vote on which group AI could help with most. Each learner circles one task for their capstone.

Teaching the idea

The capstone pulls the course together. Each learner picks one real weekly task, maps it, times it, and redesigns it as a repeatable routine: AI drafts, summarises, formats or translates; a person decides, checks and sends. “Automate” here means a repeatable AI-assisted routine with saved prompts, a custom assistant or a template, not software that runs by itself; that is Level 2. Insist on honest measurement (checking time counts) and a responsible-use checklist for their workplace. The 3-minute demo is the proof they can show their manager.

Analogy: It is like writing the recipe for a dish you cook every week: once the recipe card is written and tested, anyone in the kitchen can make it faster, and the taste test at the end is still yours.

Live demo: 1) Show a sample task map on screen: “Weekly sales update, 90 minutes”, with five steps and times. 2) Paste the task into Claude with the “which steps can AI help with” prompt; read the table and point out the risky tip if it appears (or show the one from the video). 3) Save the 5-line weekly template prompt in ChatGPT and run it on the lesson 4 summary table. 4) Show the routine card and the after time (25 + 10 minutes). 5) Run a 3-minute demo yourself, with a timer visible, as a model for learners.

Questions to ask

Ask	Listen for
Why time the task before changing it?	Without a before time, you cannot prove the time saved.
Which steps should a person always own?	Decisions, approvals, final checks of numbers and meaning, anything sent to clients.

Does checking time count in the after time?	Yes. Checking is part of the routine.
What makes the routine repeatable?	Saved prompts, a custom assistant or template, and a routine card.
Name two items on a workplace responsible-use checklist.	Any two of: no private data in personal accounts, check every output, label AI work, manager approval for new uses, use company-approved tools.

Differentiation

Support
Offer three ready capstone tasks (weekly sales update, parents' newsletter, client document reminders) with a half-filled task map; learners adapt one.

Stretch
Combine two tools in the routine (for example NotebookLM for answers from a policy and Canva for the weekly poster) and estimate the time saved over a year.

Common misconceptions

Misconception	How to fix it
Automating means I never look at it again.	AI drafts; you check and send every time.
The time saved is just the AI time.	Count the checking time too, honestly.
If my manager asks, I can upload anything.	Confidential data stays out of personal accounts; suggest a safe alternative.
A bigger task is a better capstone.	A small, real, weekly task you finish and measure is better.

Assessment

Project rubric (also on the project brief):

Criterion	1 · Beginning	2 · Developing	3 · Secure	4 · Excellent
Task map and design	No clear steps	Steps listed but AI and human roles unclear	Clear steps with AI steps and human checks marked	Clear, efficient design with privacy steps and a reusable routine card
Use of AI tools	One vague prompt	One tool used with a basic prompt	Two or more tools with saved 4-part prompts or templates	Tools well chosen for each step, prompts tested and improved

Measurement and checking	No times given	Times given without checking time	Honest before and after times including checks, with one caught mistake	Honest times, caught mistake explained, and quality changes noted
Responsible use and demo	No checklist; private data used	Basic checklist; demo unclear or over time	Clear checklist and a 3-minute demo that covers the task, times and one mistake	Workplace-ready checklist and a confident demo a manager could act on

Exit ticket
In one sentence: which step of your routine will always need a human, and why?

Homework
Use your routine for the next two weeks, note the time each week, and share your routine card and checklist with your manager or team.

Answer key — Kitabash activities

1. Prompt Lab: design your AI routine (perform · ai lab)

Checklist: Steps in order · Which steps the AI does · Where you check · Keeping private data out · Time before and after

Strong example:

```
Task: weekly sales update. Step 1: export the sheet and remove customer names (privacy).
Step 2: ask ChatGPT to list duplicates and blanks; I fix them. Step 3: Claude writes the
SUMIF formulas; I check the totals with my own SUM. Step 4: my saved prompt drafts the
5-line email; I check every number and send. Before: 90 minutes. After: 35 minutes
including checks.
```

2. AI step or human step? (perform · categorize)

AI can draft it: First draft of the weekly sales summary from a cleaned table, Turning meeting notes into an action-item table, First draft of the parents' newsletter, A Hindi version of a notice (draft)
A person must decide or check it: Deciding which customer gets extra credit time, Final check of every number before it goes to the boss, Approving a payment, Checking the Hindi says the right thing

3. The capstone path (perform · ordering)

Order: Pick one weekly task → Map every step and time it (before) → Mark AI steps and human checks → Make templates and a routine card → Run the new routine and time it (after) → Present a 3-minute demo with your checklist

4. Honest time saved (perform · multiple choice)

Answer: 55 minutes

5. Capstone: automate one weekly task (probe · project)

6. New situation: the appraisal forms (probe · multiple choice)

Answer: Explain that appraisals are confidential, suggest using a company-approved AI tool if there is one, or use AI only for a feedback template with no names or details

Answer key — worksheet

1. **Key words:** workflow / routine = The steps you follow to finish a task, in order. · automate = Make a task faster and repeatable with tools; in this course, AI drafts and you check. · human check = A step where a person reviews, decides or approves before anything moves on. · template = A saved prompt, document or sheet you reuse every week.

2. **Prompt Lab: design your AI routine:** Include: Steps in order; Which steps the AI does; Where you check; Keeping private data out; Time before and after. Example: Task: weekly sales update. Step 1: export the sheet and remove customer names (privacy). Step 2: ask ChatGPT to list duplicates and blanks; I fix them. Step 3: Claude writes the SUMIF formulas; I check the totals with my own SUM. Step 4: my saved prompt drafts the 5-line email; I check every number and send. Before: 90 minutes. After: 35 minutes including checks.
3. **AI step or human step?:** AI can draft it: First draft of the weekly sales summary from a cleaned table, Turning meeting notes into an action-item table, First draft of the parents' newsletter, A Hindi version of a notice (draft) · A person must decide or check it: Deciding which customer gets extra credit time, Final check of every number before it goes to the boss, Approving a payment, Checking the Hindi says the right thing
4. **The capstone path:** 1 Pick one weekly task · 2 Map every step and time it (before) · 3 Mark AI steps and human checks · 4 Make templates and a routine card · 5 Run the new routine and time it (after) · 6 Present a 3-minute demo with your checklist
5. **Honest time saved:** B. 55 minutes — 90 − (25 + 10) = 55 minutes. Checking is part of the new routine, so it counts in the "after" time.
6. **My plan:** A clear plan that covers every requirement.
7. **Checklist:** All requirements met.
8. **Two stars and a wish:** Kind, specific feedback and an improvement.
