COURSE GUIDE & SYLLABUS · ADULTS (18+) · AGES 18–65

AI at Work (Professional) Intermediate: AI at Work · Level 2: Automate and Specialise

Templates, mail merge, self-updating dashboards, forms and small checked scripts, then AI for your own role, all in plain words.

The second course in AI at Work, for adults who have finished Level 1 or already use a chatbot at work. Level 1 taught good prompts, documents, one-off spreadsheets and one AI routine; Level 2 makes the repetitive work run with less typing, and then specialises in your job. Module 1 automates the repetitive work: reusable prompt templates and mail merge where the AI never sees your real list, spreadsheet formulas with several conditions (SUMIFS, COUNTIFS, IF, XLOOKUP, TEXT) and conditional formatting for a weekly dashboard that updates itself, Google Forms or Microsoft Forms into a sheet with AI summaries you verify, and a small Apps Script written with AI help and explained line by line, under a strict “check before you run” rule. The module project automates one recurring report end to end, with human checkpoints and a time-saved log. Module 2 is AI for your role: you choose a path inside each lesson for sales and customer messages, teaching and training, or HR, office and small business work, and build a kit with honesty, accuracy and bias checks. The capstone is your own AI work playbook: map your week, automate three tasks, measure the time saved, write your responsible-use rules and present. Everything is done hands-on in real tools (ChatGPT, Claude, Gemini, Microsoft Copilot, NotebookLM, Perplexity, Canva, Google Sheets or Excel, Gmail or Outlook, Google Forms) with invented practice data.

What learners will be able to do

- Turn repeated messages into prompt templates with placeholders and build a template library
- Build personal messages with a sheet formula or mail merge without the AI seeing your real list
- Get formulas with several conditions (SUMIFS, COUNTIFS, IF, XLOOKUP, TEXT) and conditional formatting rules from plain words
- Clean a messy sheet and build a weekly dashboard that updates itself, then verify it by hand
- Collect data with Google Forms or Microsoft Forms and get AI themes with counts and exact quotes, checked with COUNTIF
- Use a small AI-written Apps Script safely: explain every line, run on a copy, email only yourself
- Automate one recurring report end to end with three human checkpoints and an honest time-saved log
- Write honest follow-ups, objection replies and CRM notes for your sales path
- Make a checked lesson pack with three levels, a rubric and feedback for your teaching path
- Write fair job posts, plain-words policies, minutes and quotation wording, with bias and number checks
- Build, measure and present your own AI work playbook with responsible-use rules

How every lesson works

Watch	A short animated explainer video with captions and read-aloud narration.
Learn	Learn cards in plain language, then a step-by-step walkthrough of the real AI tool.
Prompt Lab	Learners write prompts for real tasks and get instant checklist feedback, then copy them into the AI tool and judge the result.
Quick checks	Sorting, ordering and choice questions with instant feedback (spot the hallucination, safe or unsafe, better prompt).
Probe	Apply the skill to a new situation and explain your thinking.
Projects	Every lesson produces something real you keep: a prompt library, a poster, a summary, an assistant. Module projects are reviewed with a rubric.
Printables	Worksheet for every lesson, project brief for every project, project kits (prompt templates) and a teacher lesson plan with answer keys.

Scope and sequence

#	Lesson	Big idea	Learners build
1	**Templates That Write Themselves** Turn the messages you send every week into reusable prompt templates with placeholders, build personal messages with a sheet formula or mail merge without the AI seeing your real list, and start a template library.	Templates and merge	Build your first templates and a merge
2	**Spreadsheet Automation: A Dashboard That Updates Itself** Get AI to write formulas with several conditions (SUMIFS, COUNTIFS, IF, XLOOKUP, TEXT) and conditional formatting rules, clean a messy sheet with formulas, build a weekly dashboard that updates when the date or data changes, and verify every number.	Formulas that update	Build the self-updating weekly dashboard
3	**Forms to Sheet to Summary** Collect responses with Google Forms or Microsoft Forms, use AI to find themes with counts and exact quotes, and run a small AI-written Apps Script that emails you a summary, after checking every line before you run it.	Collect, summarise, send	Build the feedback-to-summary workflow
4	**Project: Automate One Recurring Report** Automate one recurring report from data to delivery by joining a self-updating sheet, a prompt template and an emailed draft, with human checkpoints at every risky step and an honest time-saved log.	End-to-end report	Project: Automate one recurring report end to end
5	**AI for Sales and Customer Messages** Choose your sales path and use AI to write lead follow-ups, handle common objections, reply on WhatsApp and email, and turn call notes into clear CRM notes, while following strict honesty rules.	Honest sales messages	Build your follow-up kit

6	**AI for Teachers and Trainers** Choose your teaching path and use AI to draft a lesson plan, worksheets at three levels, a rubric and feedback comments, then check every answer, fact and level for accuracy and age-fit before you use them.	Lesson packs, checked	Build one lesson pack
7	**AI for HR, Office and Small Business Owners** Choose your path and use AI to draft fair job posts, policies in plain words, meeting minutes and the wording of quotations or invoices, then run bias, accuracy and number checks before anything is used.	Office kit + bias checks	Build your role kit: 5 prompts + checks
8	**Capstone: Your AI Work Playbook** Map a full work week, choose three tasks to automate with a simple score, build the prompts, templates and automations for each, measure the time saved, write your own responsible-use rules, and present your playbook.	Your AI playbook	Project: Your AI work playbook

Modules

Module 1 · Automate the repetitive work
Templates and mail merge, multi-condition formulas and a self-updating dashboard, forms to sheet to AI summary with a small checked Apps Script. Project: automate one recurring report end to end.

Big question: Which parts of my weekly work can run by themselves, and where must a person still check?

Module 2 · AI for your role
Choose your path: sales and customer messages, teaching and training, or HR, office and small business. Build a kit with honesty, accuracy and bias checks. Capstone: your AI work playbook.

Big question: How do I use AI to do my own job better, more fairly and more honestly, while I stay responsible for every result?

Assessment

Prompt Lab tasks give instant checklist feedback. Quick checks give instant feedback. Written answers and projects are reviewed by the teacher against 4-level rubrics (Beginning · Developing · Secure · Excellent).

What you need

- A laptop with a modern browser (a phone is not enough for the spreadsheet and script lessons)
- Free accounts (learners are adults): at least two of ChatGPT, Claude (18+), Gemini and Microsoft Copilot; plus NotebookLM, Perplexity and Canva
- A Google account (Google Sheets, Google Forms, Gmail and Apps Script) or a Microsoft account (Excel, Microsoft Forms, Outlook)

- Optional: Zapier or Microsoft Power Automate (free plans exist; check the current free plan and your company's IT rules)
- The Kitabash Prompt Lab (built into each lesson) and the downloadable practice files, scripts, project kits and teacher demo scripts

Before you start

- AI at Work, Made Simple (Level 1), or equivalent: you can write a clear prompt, check an AI answer, and use basic spreadsheet formulas like SUM and SUMIF.
- Learners must be 18 or older (Claude requires 18+).

Safety and privacy

Privacy rule in every lesson: never paste passwords, OTPs, Aadhaar, PAN, bank or card details, or anyone's personal details into an AI tool, and never put confidential company or client data into a personal AI account; use placeholders and company-approved tools. The AI writes templates while the sheet fills in real names. Automations send drafts only to the learner, and a person checks before anything goes to others. Scripts follow the check-before-you-run rule (explain every line, read-only, email only me and once, run on a copy, read the permission screen, know how to switch it off). AI makes mistakes, so every lesson checks numbers, counts, answer keys and claims. Honest use: no fake urgency, fake reviews or invented offers; message only people who agreed; bots say they are bots; label AI-made work; AI never decides about people (hiring, pay, discipline, credit). Learners are adults (18+).

What comes next

After this course: **AI at Work · Level 3 (role specialisations and AI agents)**.

Kitabash original curriculum. Product names (ChatGPT, Gemini, Claude, Copilot, Canva, NotebookLM, Perplexity, Teachable Machine) belong to their owners; Kitabash is not affiliated with or endorsed by them. Tools and age rules change: check each tool's current terms before class.
