Lesson 2: Spreadsheet Automation: A Dashboard That Updates Itself

Module 1 | 60 minutes | Formulas that update | Adults (18+) · ages 18–65

Name: Class: Date:

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. SUMIFS / COUNTIFS ___ A. A rule that colours cells automatically, like red when sales are below target.
b. TRIM ___ B. Shows a number or date in a neat format, like 15,310 or 19 Oct 2026.
c. TEXT function ___ C. Removes extra spaces at the start or end of text, so “Baner ” matches “Baner”.
d. conditional formatting ___ D. Add up or count only the rows that match several conditions at once.

2. Prompt Lab: a formula with several conditions

Write a prompt asking the AI for the “credit to collect” formula on your Dashboard: the total Amount of orders in the week that starts on the Monday in B1, where Status is Delivered and Payment is Credit. Name your app and tabs, give the column letters (Date A, Amount H, Payment I, Status J), list every condition, say exactly where the week ends, and ask for an explanation. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

3. Prompt Lab: a check column and a colour rule

Some rows in your Orders tab have an Amount that is not Qty × Rate. Write a prompt asking the AI for (1) a check-column formula in column K that shows “OK” or “Check”, and (2) a conditional formatting rule that colours the whole row red when column K says “Check”. Name your app, give the columns (Qty F, Rate G, Amount H), and ask where to click. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

4. Match each tool to the job it does on your dashboard

Draw a line from each word to its match.

a. SUMIFS ..... A. Colour a cell red when sales are below target
b. COUNTIFS ..... B. Find an item’s price in a separate price list
c. TRIM ..... C. Show a date or amount as a neat label, like 19 Oct 2026
d. TEXT ..... D. Remove extra spaces, like “Baner ” with a space at the end
e. XLOOKUP ..... E. Count orders that match several conditions
f. Conditional formatting ..... F. Add amounts that match several conditions, like this week and delivered

5. Dashboard build order

Put the steps for building a trustworthy dashboard in order. Number them 1–7.

a. ___ Verify one number by hand with a filter
b. ___ Add conditional formatting for targets
c. ___ Ask AI for formulas that point at that cell
d. ___ Put the week start date in one cell
e. ___ Clean it: duplicates, spaces, text amounts, blanks
f. ___ Import the data into an Orders tab
g. ___ Change the date to test that everything updates

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can get formulas with several conditions (SUMIFS, COUNTIFS) from a plain-words request.

☐ I can clean a messy sheet with TRIM and a check column.

☐ I can build a dashboard that updates when the date or data changes, with conditional formatting.

☐ I can verify a dashboard number with a filter and explain any difference.
