Lesson 3: Forms to Sheet to Summary

Module 1 | 60 minutes | Collect, summarise, send | Adults (18+) · ages 18–65

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. Google Forms / Microsoft Forms ___ A. A setting that runs a script automatically, for example every Monday morning.
b. Apps Script ___ B. Part of a script that repeats for every row; anything inside it happens many times.
c. loop ___ C. A free helper inside Google Sheets that runs small programs, like sending you an email.
d. trigger ___ D. Free tools that collect answers to questions and save them in a sheet.

2. Prompt Lab: summarise form responses

You have 18 workshop feedback responses with the personal details removed. Write a prompt asking the AI to summarise the “what to improve” comments. Say the data is anonymous, ask for themes, a count for each theme, exact quotes, no invented content, and suggested actions. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

3. Prompt Lab: ask for a safe script

Write a prompt asking the AI to write a Google Apps Script that emails you a summary of a form. Name the tab and the rating column, say what to calculate, say it must email only you and only once, that it must only read the sheet, and ask for every line to be explained. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

4. Check before you run

Put the check-before-you-run steps in order. Number them 1–7.

a. ___ Check your inbox: one email, right numbers
b. ___ Read the permission screen before allowing
c. ___ Make a copy of the sheet and run it there
d. ___ Confirm it emails only you, and only once
e. ___ Confirm it only reads data (no delete, clear or set)
f. ___ Ask the AI to explain every line
g. ___ Only then add a trigger, and note how to delete it

5. Script or automation: test it on a copy, or stop and fix it first?

Write each item in the right group: Looks safe to test on a copy / Stop: fix it or ask before running.

a. Reads the sheet and emails a summary to you → _____
b. Has a line with deleteRow or clear() → _____
c. Sends one email, after the loop → _____
d. Calls sendEmail inside a loop over every row → _____
e. Emails every address found in the responses → _____
f. Uses getDisplayValue to read one dashboard cell → _____
g. A script from a stranger’s video that nobody has explained to you → _____
h. A Zapier or Power Automate step that posts every response, phone numbers included, to a team chat → _____

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can set up a Google or Microsoft Form that sends answers to a sheet.

☐ I can get AI themes with counts and exact quotes, and verify the counts.

☐ I can ask AI for a small Apps Script and explain what each part does.

☐ I can apply the check-before-you-run rule and run a script safely on a copy.
