Lesson 6: AI for Teachers and Trainers

Module 2 | 60 minutes | Lesson packs, checked | Adults (18+) · ages 18–65

Objective: Choose your teaching path and use AI to draft a lesson plan, worksheets at three levels, a rubric and feedback comments, then check every answer, fact and level for accuracy and age-fit before you use them.

Success criteria

- I can get a lesson plan from AI and adapt it to my learners.
- I can make a worksheet at three levels with an answer key, and check every answer.
- I can draft a rubric and feedback comments without sharing student details.
- I can check AI materials for accuracy, age-fit and syllabus fit.

Key vocabulary

- **lesson plan**: The steps of a lesson with times: starter, main activity, practice, check.
- **differentiated**: The same topic at different levels, so every learner works at the right level.
- **answer key**: The correct answers, ideally with working, for checking learners' work.
- **rubric**: A table describing what work looks like at each level for each criterion.
- **age-fit**: Whether the words, examples and difficulty suit your learners' age.
- **grounded**: When the AI answers only from sources you gave it, like NotebookLM.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Project files: l06_lesson_pack_kit.md, l06_teacher_demo_script.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	"Spot the teacher's error" pair race (see Unplugged).
5 min	**Watch + choose your path**	Play the lesson video. Everyone types A, B or C; form path groups.
7 min	**Live demo**	Three-level worksheet and the wrong key catch, feedback with [Student], NotebookLM quiz with citations, the six-point check.
8 min	**Prompt Labs**	Prompt Lab: a lesson plan, then a three-level worksheet. Paste into a chatbot and test.

14 min	**Build along (path groups)**	Breakout rooms by path: build steps 1–6. Partners solve each other's answer keys.
7 min	**Team games**	Quick competition: the privacy sort, then the check match, then the suspicious-essay question as a poll.
6 min	**Show-and-tell**	One learner per path shows a worksheet level and the error their check caught.
4 min	**Probe**	New situation: the wrong sick-leave number (individual).
4 min	**Wrap-up**	Exit ticket; homework: use one part of the pack with real learners.

Unplugged warm-up

Spot the teacher's error (5 min): show five "answer key" lines, two of them wrong (for example 1/2 + 1/3 = 2/5 and "The capital of Australia is Sydney"). Pairs race to find and fix the errors. Say: "AI makes exactly these mistakes in answer keys. Today you are the examiner."

Teaching the idea

Today learners who teach or train build one complete lesson pack: a plan, a three-level worksheet with an answer key, a rubric and feedback comments. They choose a path: A school teacher, B tutor or coaching centre, C workplace trainer. AI drafts fast, but teaching materials must be accurate and fit the learners, so the lesson centres on a six-point check: solve every answer, read as the weakest reader, check examples, match the syllabus, check facts, label honestly. The caught mistake is a wrong answer key (3/4 + 1/8 = 4/12). Privacy: no student names, marks, work or photos in personal accounts; use [Student].

Analogy: AI is like a student teacher who prepares your materials overnight: keen and quick, but you check the answer key before anything goes on the board.

Live demo: 1) Ask learners to type A, B or C. 2) Paste the Class 6 fractions worksheet prompt into Gemini. 3) Ask the class to solve the core questions on paper; compare with the key. If the AI's key is correct, show the 3/4 + 1/8 = 4/12 version from the video. 4) Paste the feedback prompt into Claude with [Student]; point out there is no name. 5) In NotebookLM, add a short handout you wrote and ask for 5 quiz questions with citations; click a citation. 6) Read the six-point check aloud.

Questions to ask

Ask	Listen for
What five things should a lesson plan prompt include?	Learners/level, topic, time, one goal, and the parts (starter, activity, practice, check).
What does differentiated mean?	The same topic at different levels: support, core, challenge.
What is the first check on any AI answer key?	Solve every question yourself.

How do you give feedback with AI without sharing a name?	Use [Student] and add the name yourself afterwards.
Is an AI detector enough to prove a student cheated?	No. Talk with the student and follow the school's policy.

Differentiation

Support
Give learners the ready prompts from the kit for their path; they change only the topic and level, then focus on the six-point check.

Stretch
Ask for a Hindi version of the support worksheet and have a fluent speaker check it, or make a 5-slide visual version of the lesson in Canva and label it as AI-assisted.

Common misconceptions

Misconception	How to fix it
AI maths and facts are always right.	Answer keys are often wrong. Solve every answer.
The AI knows my board's syllabus.	It may guess. Compare with your own syllabus.
Using a first name only is fine.	Use [Student]. Names, marks and work stay out of personal accounts.
AI detectors prove cheating.	They are unreliable; talk to the student and follow policy.

Assessment

Use the Prompt Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
Name one mistake you would expect in an AI answer key, and how you would catch it.

Homework
Finish your lesson pack, run the six-point check, and use one part of it with real learners. Note one thing you changed after the check.

Answer key — Kitabash activities

1. Prompt Lab: a lesson plan (perform · ai lab)

Checklist: Give the AI a role · Describe the learners and level · Name the topic · Give the time · State one clear goal · Ask for the parts · Make it fit your learners

Strong example:

```
You are an experienced Class 6 maths teacher in India. Plan a 40-minute lesson on adding fractions with different denominators. Goal: by the end, students can add two fractions where one denominator is a multiple of the other. Include a 5-minute starter, a short demo, pair practice and a 3-question quick check. Use simple English and familiar Indian examples like rotis and laddoos.
```

2. Prompt Lab: a three-level worksheet (perform · ai lab)

Checklist: Ask for three levels · Say how many questions · Ask for an answer key · Ask for working or steps · Set the reading level or age · Ask for familiar examples

Strong example:

```
Make a Class 6 worksheet on adding fractions with 3 levels: Support (same denominators), Core (one denominator is a multiple of the other) and Challenge (word problems). 3 questions per level. Include an answer key that shows the working for each question. Use simple English for 11-year-olds and familiar Indian examples like sharing laddoos or rupees.
```

3. Teacher privacy: OK to paste into a personal AI account, or never? (perform · categorize)

OK to paste: The chapter topic and the learning goal, Your own lesson notes, Rough feedback notes that say [Student] instead of a name, A public syllabus outline
Never paste (use placeholders or a school-approved tool): A list of students with their marks, A student's essay with their name and roll number, A photo of your class, A parent's complaint email with their phone number

4. Match each check to the problem it catches (perform · matching)

Solve every answer yourself → A wrong answer key, like 3/4 + 1/8 = 4/12 · Read it as your weakest reader → Words that are too hard for the age · Compare with your syllabus → Topics your learners have not been taught yet · Check names, foods and places → Examples that feel foreign or leave learners out · Use citations in NotebookLM → Answers that did not come from your own material

5. Honest use: the suspicious essay (perform · multiple choice)

Answer: Talk to the student, ask them to explain their work and their process, and follow your school's policy

6. New situation: the wrong sick-leave number (probe · multiple choice)

Answer: Build quizzes only from the actual policy (in NotebookLM or a company-approved AI tool), ask where each answer comes from, and still check every answer

Answer key — worksheet

1. **Key words:** lesson plan = The steps of a lesson with times: starter, main activity, practice, check. · differentiated = The same topic at different levels, so every learner works at the right level. · answer key = The correct answers, ideally with working, for checking learners' work. · rubric = A table describing what work looks like at each level for each criterion.
2. **Prompt Lab: a lesson plan:** Include: Give the AI a role; Describe the learners and level; Name the topic; Give the time; State one clear goal; Ask for the parts; Make it fit your learners. Example: You are an experienced Class 6 maths teacher in India. Plan a 40-minute lesson on adding fractions with different denominators. Goal: by the end, students can add two fractions where one denominator is a multiple of the other. Include a 5-minute starter, a short demo, pair practice and a 3-question quick check. Use simple English and familiar Indian examples like rotis and laddoos.
3. **Prompt Lab: a three-level worksheet:** Include: Ask for three levels; Say how many questions; Ask for an answer key; Ask for working or steps; Set the reading level or age; Ask for familiar examples. Example: Make a Class 6 worksheet on adding fractions with 3 levels: Support (same denominators), Core (one denominator is a multiple of the other) and Challenge (word problems). 3 questions per level. Include an answer key that shows the working for each question. Use simple English for 11-year-olds and familiar Indian examples like sharing laddoos or rupees.
4. **Teacher privacy: OK to paste into a personal AI account, or never?:** OK to paste: The chapter topic and the learning goal, Your own lesson notes, Rough feedback notes that say [Student] instead of a name, A public syllabus outline · Never paste (use placeholders or a school-approved tool): A list of students with their marks, A student's essay with their name and roll number, A photo of your class, A parent's complaint email with their phone number
5. **Match each check to the problem it catches:** Solve every answer yourself → A wrong answer key, like 3/4 + 1/8 = 4/12 · Read it as your weakest reader → Words that are too hard for the age · Compare with your syllabus → Topics your learners have not been taught yet · Check names, foods and places → Examples that feel foreign or leave learners out · Use citations in NotebookLM → Answers that did not come from your own material
