Lesson 7: AI for HR, Office and Small Business Owners

Module 2 | 60 minutes | Office kit + bias checks | Adults (18+) · ages 18–65

Objective: Choose your path and use AI to draft fair job posts, policies in plain words, meeting minutes and the wording of quotations or invoices, then run bias, accuracy and number checks before anything is used.

Success criteria

- I can get a fair job post from AI and run a bias check on it.
- I can turn a policy into plain words and check that no rule changed.
- I can turn notes into minutes with owners and dates, and draft quotation wording with the maths in a sheet.
- I can build a role kit of five prompts, each with its own check.

Key vocabulary

- **bias**: Unfair preference for or against people, like an age limit or gender in a job post.
- **bias check**: Asking the AI (and then reading yourself) to find and remove unfair words.
- **plain words**: Simple, everyday language that anyone can understand.
- **minutes**: The official record of a meeting: attendees, decisions and actions.
- **quotation**: A price offer to a customer before they buy, with terms and validity.
- **role kit**: Your set of tested prompts, each with its own check, for your job.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Project files: l07_role_kit.md, l07_teacher_demo_script.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	“Spot the bias” green/red cards (see Unplugged).
5 min	**Watch + choose your path**	Play the lesson video. Everyone types A, B or C; form path groups.
7 min	**Live demo**	Biased job post, bias check and fair rewrite, the quotation maths catch, minutes and plain-words prompts.

8 min	**Prompt Labs**	Prompt Lab: a fair job post, then notes to formal minutes. Test each in a chatbot.
14 min	**Build along (path groups)**	Breakout rooms by path: build the role kit, steps 1–6. Partners test one of each other's prompts and its check.
7 min	**Team games**	Quick competition: "Fair or biased?" sort, then the task-check match, then "The 120 CVs" as a class poll with discussion.
5 min	**Show-and-tell**	One learner per path shows one prompt and what its check caught.
5 min	**Probe**	New situation: the made-up GSTIN (individual).
4 min	**Wrap-up**	Exit ticket; homework: finish the role kit and use two prompts.

Unplugged warm-up

Spot the bias (5 min): read out six real-style job-ad lines ("age below 25", "freshers welcome", "male candidates only", "good communication skills", "convent-educated", "salary negotiable"). Learners hold up a green card (fair) or red card (biased). Discuss the tricky ones. Say: "AI learned from millions of old ads like these. Today you will catch it."

Teaching the idea

Today is for HR, office and small business roles. Learners choose a path (A HR, B office admin or assistant, C small business owner) and build a role kit: five prompts, each with its own check. Teach the checks as part of the prompt: bias check for anything about people, no-rule-changed for plain-words policies, owners and dates for minutes, maths in a sheet and tax rate from the accountant for quotations and invoices, a fluent speaker for translations. Two caught mistakes: the AI adds age, gender and looks to a job post (copying old Indian job-ad habits), and miscalculates a quotation subtotal. The big rule: AI must not decide about people, and HR data stays out of personal accounts.

Analogy: Your role kit is like a set of rubber stamps with an inspection sticker on each: the stamp makes the work fast, the sticker reminds you what to check before it leaves the office.

Live demo: 1) Learners type A, B or C. 2) Paste the receptionist job post prompt into ChatGPT. Look for age, gender, looks, photo or "native speaker". If none appear, show the video version and say "it often does this, because it learned from old ads". 3) Paste the post into Claude with the bias-check prompt and read the fair rewrite. 4) Paste the quotation prompt into Copilot; check in a sheet: =40*350+40*120 (18,800), =18800*18% (3,384), total 22,184. 5) Show the minutes prompt and the plain-words policy prompt; stress "flag, don't guess" and "no rule changed". 6) Show the role kit table.

Questions to ask

Ask	Listen for
Name three things that must never be in a job post.	Any three: age limits, gender, religion, caste, marital status, looks, photo request, "native speaker".

Who does the maths on a quotation?	Your sheet or billing software, not the AI; the accountant confirms the tax rate.
What is the check for a plain-words policy?	No rule, number, date or exception has changed; the original stays official.
Can AI shortlist candidates?	No. It can help write fair criteria and questions; people decide.
What should a minutes prompt ask the AI to do with unclear points?	Flag them instead of guessing.

Differentiation

Support
Give learners the ready-made role kit for their path from the kit file; they test each prompt once and write the check in their own words.

Stretch
Write a short “AI use at our office” notice in plain words and Hindi (checked by a fluent speaker), or build the quotation as a sheet template with formulas for subtotal, GST and total.

Common misconceptions

Misconception	How to fix it
The AI will write a fair job post by default.	It often copies old biased habits. Always run a bias check and read it yourself.
AI maths on invoices is reliable.	Do the maths in a sheet or billing software.
Removing names makes AI shortlisting fair.	AI must not decide about people; people score against fair criteria.
A plain-words policy replaces the original.	The original stays the official version; check nothing changed.

Assessment

Use the Prompt Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
Pick one prompt from your role kit and say its check in one sentence.

Homework
Finish your role kit (5 prompts + checks) and use two of the prompts at work this week with placeholders. Note what each check caught.

Answer key — Kitabash activities

1. Prompt Lab: a fair job post (perform · ai lab)

Checklist: Say it is a job post · List the duties · List the skills needed · Give timings or location · Ask for fairness or a bias check · Forbid age, gender or marital limits · Set a length

Strong example:

```
Write a job post for an accounts assistant at our small trading business, office in
Jaipur. Duties: enter bills in our accounting software, reconcile bank statements,
prepare payment reminders. Skills: basic accounting, Excel, care with numbers;
experience 0–2 years. Timings 9:30 am to 6 pm, Monday to Saturday. Keep it fair and
inclusive: no age, gender, religion or marital-status requirements, and no photo
request. Under 120 words. At the end, run a bias check and list any words you changed.
```

2. Prompt Lab: notes to formal minutes (perform · ai lab)

Checklist: Ask for the main sections · Owner and due date for each action · Choose a clear format · Tell the AI not to add anything · Ask it to flag unclear points · Say confidential names were replaced

Strong example:

```
Turn my rough notes from today's monthly operations meeting into formal minutes with
headings: Date, Attendees, Decisions, and an Action items table with Owner and Due date
for each action. I replaced confidential names with roles (Accounts Head, Store
Manager). Do not add anything that is not in the notes. If an owner or date is unclear
or missing, flag it instead of guessing. Notes: [paste notes]
```

3. Job post line: fair, or biased? (perform · categorize)

Fair: keep it: "Must be comfortable managing appointments on a computer", "Freshers welcome; we will train you", "Clear spoken English or Hindi", "Salary: ₹18,000–₹22,000 per month"
Biased: rewrite it: "Age 22–30 only", "Female candidates preferred", "Native English speaker", "Unmarried candidates only", "Good-looking, fair-skinned candidates"

4. Match each task to the check that must happen before you use it (perform · matching)

Job post → Bias check: no age, gender, looks or background requirements · Plain-words policy → No rule, number, date or exception changed from the original · Meeting minutes → Every decision, owner and date matches the notes · Quotation or invoice → Maths done in a sheet; tax rate confirmed with your accountant · Hindi version of a notice → A fluent speaker checks the meaning

5. The 120 CVs (perform · multiple choice)

Answer: Explain that CVs are personal data and AI must not decide; suggest using AI to write fair scoring criteria, then people score the CVs (or use the company's approved HR tool)

6. New situation: the made-up GSTIN (probe · multiple choice)

Answer: Delete it: the AI invented it. Use her real GSTIN from her registration, and make invoices in her billing software or a checked sheet

Answer key — worksheet

1. **Key words:** bias = Unfair preference for or against people, like an age limit or gender in a job post. · bias check = Asking the AI (and then reading yourself) to find and remove unfair words. · plain words = Simple, everyday language that anyone can understand. · minutes = The official record of a meeting: attendees, decisions and actions.
2. **Prompt Lab: a fair job post:** Include: Say it is a job post; List the duties; List the skills needed; Give timings or location; Ask for fairness or a bias check; Forbid age, gender or marital limits; Set a length. Example: Write a job post for an accounts assistant at our small trading business, office in Jaipur. Duties: enter bills in our accounting software, reconcile bank statements, prepare payment reminders. Skills: basic accounting, Excel, care with numbers; experience 0–2 years. Timings 9:30 am to 6 pm, Monday to Saturday. Keep it fair and inclusive: no age, gender, religion or marital-status requirements, and no photo request. Under 120 words. At the end, run a bias check and list any words you changed.
3. **Prompt Lab: notes to formal minutes:** Include: Ask for the main sections; Owner and due date for each action; Choose a clear format; Tell the AI not to add anything; Ask it to flag unclear points; Say confidential names were replaced. Example: Turn my rough notes from today's monthly operations meeting into formal minutes with headings: Date, Attendees, Decisions, and an Action items table with Owner and Due date for each action. I replaced confidential names with roles (Accounts Head, Store Manager). Do not add anything that is not in the notes. If an owner or date is unclear or missing, flag it instead of guessing. Notes: [paste notes]
4. **Job post line: fair, or biased?:** Fair: keep it: "Must be comfortable managing appointments on a computer", "Freshers welcome; we will train you", "Clear spoken English or Hindi", "Salary: ₹18,000–₹22,000 per month" · Biased: rewrite it: "Age 22–30 only", "Female candidates preferred", "Native English speaker", "Unmarried candidates only", "Good-looking, fair-skinned candidates"
5. **Match each task to the check that must happen before you use it:** Job post → Bias check: no age, gender, looks or background requirements · Plain-words policy → No rule, number, date or exception changed from the original · Meeting minutes → Every decision, owner and date matches the notes · Quotation or invoice → Maths done in a sheet; tax rate confirmed with your accountant · Hindi version of a notice → A fluent speaker checks the meaning
