Lesson 8: Capstone: Your AI Work Playbook

Module 2 | 60 minutes | Your AI playbook | Adults (18+) · ages 18–65

Objective: Map a full work week, choose three tasks to automate with a simple score, build the prompts, templates and automations for each, measure the time saved, write your own responsible-use rules, and present your playbook.

Success criteria

- I can map my work week and score tasks for automation.
- I can build three automations with tools from this course, each with a human checkpoint.
- I can measure time saved honestly, including checks, setup and payback.
- I can write and present my own responsible-use rules and playbook.

Key vocabulary

- **playbook**: Your written plan of tasks, tools, checkpoints, numbers and rules for using AI at work.
- **time map**: A list of your week's tasks with how often and how long each takes.
- **task score**: Minutes per week × how repetitive ÷ how risky, used to choose what to automate.
- **checkpoint**: A planned stop where a person checks before the work moves on.
- **payback**: Setup time divided by minutes saved per week.
- **responsible-use rules**: Your own plain-words rules for privacy, checking, honesty, approvals and decisions.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Printed project brief
- Project files: l08_playbook_kit.md, l08_teacher_demo_and_marking.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	"Where did my week go?" (see Unplugged).
4 min	**Watch + poll**	Play the capstone video. Poll: "How many hours a week could you win back?" (type a number).
6 min	**Live demo**	Time map and score, the "no review needed" catch, the rules draft and its wrong rule, the six-slide outline.

6 min	**Prompt Labs**	Prompt Lab: plan your playbook, then my responsible-use rules. Test both in a chatbot.
5 min	**Team games**	Quick competition: “Automate or keep with people?” sort, then “Which task first?” as a speed round.
15 min	**Capstone build (pairs)**	Build steps 1–5: map, score, three automations, log, rules. Partners check each other’s checkpoints and privacy.
14 min	**Demo day**	Show-and-tell: five-minute presentations in breakout rooms of three, with a timer. Peers give two stars and a wish; each room picks one to show everyone.
5 min	**Probe and submit**	New situation: “no checking needed”. Submit the capstone with the reflection, then celebrate finishing Level 2.

Unplugged warm-up

Where did my week go? (5 min): everyone writes their five biggest weekly tasks with minutes on paper or in the chat, then totals them. Ask: “Who spends more than 3 hours a week on reminders, reports or minutes?” Hands up. Then: “Which one would you automate first, and which would you never hand to AI?” Two volunteers answer.

Teaching the idea

The capstone turns Level 2 into each learner’s own playbook. Level 1’s capstone redesigned one task; this one maps a whole week, scores the tasks (minutes × repetitive ÷ risk), and automates three with tools from the course: templates and mail merge (L1), dashboards (L2), forms, summaries and scripts (L3), the report pipeline (L4) and role kits (L5–7). Every automation keeps a human checkpoint, and time saved is honest (checks and setup count, payback in weeks). Learners write their own responsible-use rules and present in five minutes. Caught mistakes: a “no review needed” Zapier tip and a rule that says templates need no checking.

Analogy: A playbook is like a cricket team’s game plan: it says who bowls which over, where the fielders stand and when to review a decision, and the captain still makes the big calls.

Live demo: 1) Show a sample time map sheet with eight tasks; add the score formula =E2*F2/G2 and sort. 2) Remove a risk-3 task and explain why. 3) Paste the top three into Claude with the tool-and-checkpoint prompt; look for any “no review needed” or “send to everyone” suggestion (if none appears, show the video). 4) Ask ChatGPT for six responsible-use rules and ask the class to find one they disagree with. 5) Show the six-slide presentation outline and run a one-minute version yourself with a timer.

Questions to ask

Ask	Listen for
How do you choose which tasks to automate first?	Score them: minutes per week × repetitive ÷ risk; leave high-risk decisions with people.

What must every automation in your playbook have?	A human checkpoint (and test data first).
What counts in the “after” time?	The time with AI plus the checking time; setup is counted separately for payback.
Name three topics your responsible-use rules must cover.	Any three: privacy, checking, honesty/labelling, approvals, decisions AI must never make.
What goes on the last slide?	Your rules, what you will automate next, and what you will never hand to AI.

Differentiation

Support
Offer a half-filled time map for a common role (office executive, teacher, shop owner) and let learners reuse their lesson 4 report as one of the three automations.

Stretch
Add a fourth automation using an optional tool such as Zapier or Power Automate (check the current free plan), with a checkpoint, or estimate hours saved per year and propose a team pilot to your manager.

Common misconceptions

Misconception	How to fix it
The biggest task is always the best one to automate.	Score it: repetitive and low-risk tasks first.
Automation means no checking.	A light checkpoint keeps most of the time saved and stops costly mistakes.
The AI can write my rules for me.	It can draft; you fix and own every rule.
Time saved is easy to guess.	Measure with a timer and include checks and setup.

Assessment

Project rubric (also on the project brief):

Criterion	1 · Beginning	2 · Developing	3 · Secure	4 · Excellent
Task choice and time map	No map; tasks chosen at random	Map made but no score, or risky tasks chosen	Clear map and score; three sensible low-to-medium-risk tasks	Clear map, well-reasoned choices, and high-risk tasks consciously kept with people

Automations and checkpoints	Vague ideas only	One or two automations working, checkpoints unclear	Three working automations from course tools, each with a checkpoint	Three reliable automations, well-placed checkpoints, and a routine a colleague could follow
Measurement and honesty	No times	Times without checks or setup	Honest before/after with checks, setup and payback; one caught mistake	Honest numbers over more than one run, caught mistakes explained, and fixes added
Responsible use and presentation	No rules; private data shown	Generic rules; presentation unclear or over time	Own plain-words rules covering privacy, checking, honesty, approvals and decisions; clear five-minute talk	Workplace-ready rules and a confident talk a manager could act on, including what never goes to AI

Exit ticket
Name one task you will automate next, and one task you will never hand to AI. Why?

Homework
Run your playbook for two weeks, keep the time-saved log, and share the playbook with your manager or team. Bring one question for Level 3.

Answer key — Kitabash activities

1. Prompt Lab: plan your playbook (perform · ai lab)

Checklist: Describe your role · List tasks with minutes · Rank by repetitiveness and risk · Give the tool options · Ask for a checkpoint for each · Ask for a table · Say no personal data is included

Strong example:

```
I am an accounts assistant at a small distributor. My weekly tasks: payment reminders (40 minutes), weekly sales report (75 minutes), supplier emails (30 minutes), meeting minutes (45 minutes), checking credit limits (60 minutes). There is no personal or customer data here. Rank the tasks by how repetitive they are and how risky a mistake would be. For my top three, suggest a tool (template, mail merge, dashboard, form + summary, Apps Script or a role prompt kit) and one human checkpoint each. Answer as a short table.
```

2. Prompt Lab: my responsible-use rules (perform · ai lab)

Checklist: Name your role · Privacy · Checking · Honesty or labelling · Approvals · What AI must never decide · Plain words, one line each

Strong example:

```
Help me write 6 responsible-use rules for using AI in my job as a school office administrator. Cover privacy of student and parent data, checking every output, honesty and labelling AI-made work, approval from the principal for new uses, and decisions about people that AI must never decide (admissions, fees waivers, discipline). Plain words, one line each.
```

3. In your playbook: automate with a checkpoint, or keep with people? (perform · categorize)

Automate (with a checkpoint): Weekly sales report, Fee reminders to parents who opted in, First draft of meeting minutes, Summarising form feedback
Keep with people: Deciding salary increments, Replying to a customer's serious complaint, Choosing which candidate to hire, Approving a large refund

4. Which task first? (perform · multiple choice)

Answer: Task A (score 360)

5. Capstone: your AI work playbook (probe · project)

6. New situation: "no checking needed" (probe · multiple choice)

Answer: Explain the risk (wrong amounts, people who opted out, spam) and offer a light checkpoint: a 2-minute preview of three messages and a test to yourself before each send

Answer key — worksheet

1. **Key words:** playbook = Your written plan of tasks, tools, checkpoints, numbers and rules for using AI at work. · time map = A list of your week's tasks with how often and how long each takes. · task score = Minutes per week × how repetitive ÷ how risky, used to choose what to automate. · checkpoint = A planned stop where a person checks before the work moves on.
2. **Prompt Lab: plan your playbook:** Include: Describe your role; List tasks with minutes; Rank by repetitiveness and risk; Give the tool options; Ask for a checkpoint for each; Ask for a table; Say no personal data is included. Example: I am an accounts assistant at a small distributor. My weekly tasks: payment reminders (40 minutes), weekly sales report (75 minutes), supplier emails (30 minutes), meeting minutes (45 minutes), checking credit limits (60 minutes). There is no personal or customer data here. Rank the tasks by how repetitive they are and how risky a mistake would be. For my top three, suggest a tool (template, mail merge, dashboard, form + summary, Apps Script or a role prompt kit) and one human checkpoint each. Answer as a short table.
3. **Prompt Lab: my responsible-use rules:** Include: Name your role; Privacy; Checking; Honesty or labelling; Approvals; What AI must never decide; Plain words, one line each. Example: Help me write 6 responsible-use rules for using AI in my job as a school office administrator. Cover privacy of student and parent data, checking every output, honesty and labelling AI-made work, approval from the principal for new uses, and decisions about people that AI must never decide (admissions, fees waivers, discipline). Plain words, one line each.
4. **In your playbook: automate with a checkpoint, or keep with people?:** Automate (with a checkpoint): Weekly sales report, Fee reminders to parents who opted in, First draft of meeting minutes, Summarising form feedback · Keep with people: Deciding salary increments, Replying to a customer's serious complaint, Choosing which candidate to hire, Approving a large refund
5. **Which task first?:** A. Task A (score 360) — A: 120 × 3 ÷ 1 = 360. B: 60 × 2 ÷ 2 = 60. C: 200 × 1 ÷ 3 ≈ 67. Task A is frequent, very repetitive and low risk. Task C takes long, but it varies a lot and is high risk.
6. **My plan:** A clear plan that covers every requirement.
7. **Checklist:** All requirements met.
8. **Two stars and a wish:** Kind, specific feedback and an improvement.
