Lesson 8: Capstone: Your AI Work Playbook

Module 2 | 60 minutes | Your AI playbook | Adults (18+) · ages 18–65

Name: _____ Class: _____ Date: _____

Plan your project and practise the key ideas.

1. Key words

Match each word to what it means. Write the letter.

a. playbook ___ A. A planned stop where a person checks before the work moves on.
b. time map ___ B. Minutes per week × how repetitive ÷ how risky, used to choose what to automate.
c. task score ___ C. A list of your week's tasks with how often and how long each takes.
d. checkpoint ___ D. Your written plan of tasks, tools, checkpoints, numbers and rules for using AI at work.

2. Prompt Lab: plan your playbook

Write a prompt asking the AI to help you plan your playbook. Describe your role, list your tasks with the minutes each takes, ask it to use repetitiveness and risk to rank them, give the tool options, ask for a human checkpoint for each, ask for a table, and say that no personal data is included. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

3. Prompt Lab: my responsible-use rules

Write a prompt asking the AI to help draft your own responsible-use rules. Name your role, and ask for rules on privacy, checking, honesty or labelling, approvals, and what AI must never decide, in plain words, one line each. Write your prompt here, then try it in ChatGPT or Claude or Gemini or Microsoft Copilot.

4. In your playbook: automate with a checkpoint, or keep with people?

Write each item in the right group: Automate (with a checkpoint) / Keep with people.

a. Weekly sales report → _____
b. Fee reminders to parents who opted in → _____
c. Deciding salary increments → _____
d. First draft of meeting minutes → _____
e. Replying to a customer's serious complaint → _____
f. Summarising form feedback → _____
g. Choosing which candidate to hire → _____
h. Approving a large refund → _____

5. Which task first?

Score = minutes per week × repetitive ÷ risk. Task A: 120 min, repetitive 3, risk 1. Task B: 60 min, repetitive 2, risk 2. Task C: 200 min, repetitive 1, risk 3. Which should you automate first? Circle one.

a. A. Task A (score 360)
b. B. Task B (score 60)
c. C. Task C (score about 67)
d. D. Task C, because it takes the most minutes

6. My plan

Plan your project: Map one work week, choose three tasks by score, build a tool and human checkpoint for each from this course, measure the time saved honestly, write your responsible-use rules, and present your playbook in five minutes. Sketch it and list what each part will do.

7. Checklist

Tick each one when your project does it.

a. ☐ Time map with a score for each task
b. ☐ Three automations, each with tool, prompt or template, and checkpoint
c. ☐ Time-saved log for each: before, after with checks, setup, payback
d. ☐ At least one caught mistake or risky suggestion
e. ☐ 5–8 responsible-use rules in your own words
f. ☐ A five-minute presentation with what is next and what you will never hand to AI

8. Two stars and a wish

Ask a friend to test your project. Write two things they liked and one idea to improve it.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can map my work week and score tasks for automation.
☐ I can build three automations with tools from this course, each with a human checkpoint.
☐ I can measure time saved honestly, including checks, setup and payback.
☐ I can write and present my own responsible-use rules and playbook.
