LESSON PLAN · FINANCIAL LITERACY (GR 3–5) BEGINNER: MONEY SMART · LEVEL 1

Lesson 5: Saving for a Goal

Module 2 | 45 minutes | Goals and patience | Grades 3–6 · ages 8–11

Objective: Set a savings goal with a price and a date, work out how many weeks it will take, and track it on a chart.

Success criteria

- I can set a clear goal with a name, a price and a date.
- I can work out how many weeks a goal will take.
- I can track my savings on a chart.
- I can explain why patience helps me save.

Key vocabulary

- **goal**: Something you are saving up for.
- **target**: The amount of money you need to reach your goal.
- **savings chart**: A chart you colour to show your savings growing.
- **patience**: Waiting calmly for something better later.
- **boost**: Extra money, like a birthday or festival gift, that you add to your savings.

You will need

- Projector or screen share with Kitabash (lesson video, activities)
- Devices: 1 per learner (laptop, tablet or phone); a microphone helps for speaking tasks
- Printed worksheet, paper and pencil
- Project files: l05_savings_goal_planner.md, l05_teacher_script.md

Timed lesson plan (45 min)

Time	Stage	What happens
5 min	**Warm-up game**	“Now or later?” sticker choices; tally on the board; ask how waiting felt.
4 min	**Watch + poll**	Play the video. Poll: “What would you save for?” (chat or hands: cycle, bat, books, toy, something else).
5 min	**Live demo**	Fill a bat chart live, leave a week blank, then Meera’s cycle maths on screen.
7 min	**Build along**	Make your savings goal chart: goal, price, what you have, weekly amount, weeks, boxes.
6 min	**Weeks race**	Quick competition: “How many weeks?” blanks; first three correct explain their method.
7 min	**Budget sim**	Saving week: keep ₹100 for the bat. Thumbs check: who kept exactly ₹100? Who kept more?

4 min	**Pair games**	Breakout pairs: savings plan steps (order) and saving words (match).
4 min	**Probe**	New situation: a birthday boost. Start the savings goal planner project.
3 min	**Show-and-tell + exit**	Three learners hold up their charts and say their goal and weeks. Exit ticket.

Unplugged warm-up

Now or later? (5 min): offer the class a choice in each round: “One sticker now, or three stickers at the end of class?” (use stars on the board or real stickers). Keep a tally. At the end, give the “later” choosers their three. Ask: “How did it feel to wait? Was it worth it?”

Teaching the idea

Saving is easier with a goal: a name, a price and a date. Children can work out how many weeks a goal takes by dividing what they still need by what they save each week, and a chart they colour in turns patience into a game. Celebrate the “now or later?” moment: skipping a small treat for a bigger goal is the heart of saving. Normalise slip-ups: missing a week is fine; starting again is the skill. Keep divisions friendly (multiples of 50 and 100) for this age.

Analogy: Saving is like growing a mango tree: you water it a little every week, and one day there is fruit you could never get by eating the seeds today.

Live demo: 1) Show a picture of a cricket bat with a ₹900 price tag. 2) Ask: “If I save ₹100 a week, how long?” Draw nine empty boxes and fill them in live, saying the running total (100, 200, 300…). 3) Leave week 3 blank and say: “I spent it on snacks. Do I give up?” Class says no. Add a tenth box. 4) Do Meera’s cycle on screen: 3,000 − 600 = 2,400, then 2,400 ÷ 200 = 12. 5) Open the saving week sim and show that the comic would push the goal back a week.

Questions to ask

Ask	Listen for
What three things does a clear goal have?	A name, a price and a date.
₹900 bat, ₹100 a week. How many weeks?	9 weeks.
Why colour a chart?	Seeing savings grow keeps you motivated.
You missed a week. What now?	Start again next week; add one more box.
What is a boost?	Extra money like a birthday gift that you add to your goal.

Differentiation

Support
Use goals that are multiples of the weekly amount (₹500 at ₹100 a week) and let learners count boxes instead of dividing.

Stretch
If Meera saves ₹250 a week instead of ₹200, how many weeks does the cycle take? (2,400 ÷ 250 is 9.6, so 10 weeks.) Why do we round up?

Common misconceptions

Misconception	How to fix it
Saving means never buying anything fun.	Saving means choosing a bigger fun thing later over small things now.
If I miss a week, the goal is ruined.	Just start again. The goal only moves one week further.
Weeks = price ÷ weekly saving, even if I already have some money.	First take away what you already have.
Boost money should all be spent, because it is extra.	Putting part of a boost into your goal gets you there much faster.

Assessment

Use the Code Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
A book set costs ₹600 and you save ₹50 a week. How many weeks will it take?

Homework
Finish your savings goal planner with a grown-up, stick the chart on the wall, and colour your first box.

Answer key — Kitabash activities

1. How many weeks? (perform · fill blank)

Answers: 9 · 2400 · 12 · 8

2. Saving week: keep ₹100 for the bat (perform · budget sim)

Must buy: 🥪 School snack · **Keep at least** ₹100. After the ₹30 snack you have ₹120. Keeping ₹100 for the bat leaves just ₹20 for treats: pani puri, or the stickers and the lollipop. The comic or the game token would push your goal back a week.

3. My savings plan steps (perform · ordering)

Order: Choose your goal and find its price → Count the money you already have → Work out how much more you need → Decide how much to save each week → Work out how many weeks it will take → Colour your chart every week until you reach it

4. Saving words: match each word to its meaning (perform · matching)

Goal → The thing you are saving for · Target → The amount of money you need · Savings chart → A chart you colour as your savings grow · Patience → Waiting calmly for something better later · Boost → Extra money, like a birthday gift · Deadline → The date you want to reach your goal by

5. New situation: a birthday boost (probe · multiple choice)

Answer: 3 weeks

6. Project: my savings goal planner (probe · project)

Answer key — worksheet

1. **Key words:** goal = Something you are saving up for. · target = The amount of money you need to reach your goal. · savings chart = A chart you colour to show your savings growing. · patience = Waiting calmly for something better later.
2. **How many weeks?:** 9 · 2400 · 12 · 8
3. **Saving week: keep ₹100 for the bat:** Must buy: 🥪 School snack. Keep at least ₹100. After the ₹30 snack you have ₹120. Keeping ₹100 for the bat leaves just ₹20 for treats: pani puri, or the stickers and the lollipop. The comic or the game token would push your goal back a week.
4. **My savings plan steps:** 1 Choose your goal and find its price · 2 Count the money you already have · 3 Work out how much more you need · 4 Decide how much to save each week · 5 Work out how many weeks it will take · 6 Colour your chart every week until you reach it
5. **Saving words: match each word to its meaning:** Goal → The thing you are saving for · Target → The amount of money you need · Savings chart → A chart you colour as your savings grow ·

Patience → Waiting calmly for something better later · Boost → Extra money, like a birthday gift · Deadline → The date you want to reach your goal by
