LESSON PLAN · FINANCIAL LITERACY (GR 3–5) BEGINNER: MONEY SMART · LEVEL 1

Lesson 8: Capstone: My Mini Market Stall

Module 2 | 45 minutes | Cost, price, profit | Grades 3–6 · ages 8–11

Objective: Plan and run a pretend market stall: choose a product, work out cost, price and profit, make a poster and a sales pitch, and sell with play money.

Success criteria

- I can explain cost, price and profit.
- I can set a fair price that is more than my cost.
- I can make an honest poster and sales pitch.
- I can sell with play money, give correct change and work out my profit.

Key vocabulary

- **cost**: The money you spend to make something.
- **price**: What the customer pays for one item.
- **profit**: The money left after you take away all your costs.
- **loss**: When your costs are more than the money from sales.
- **sales pitch**: A short, friendly sentence that tells customers why to buy.

You will need

- Projector or screen share with Kitabash (lesson video, activities)
- Devices: 1 per learner (laptop, tablet or phone); a microphone helps for speaking tasks
- Printed worksheet, paper and pencil
- Printed project brief
- Project files: l08_market_stall_planner.md, l08_teacher_script.md

Timed lesson plan (45 min)

Time	Stage	What happens
4 min	**Warm-up game**	“What would you pay?” price slips for three classroom items.
3 min	**Watch**	Play the capstone video. Thumbs check: “Is all sales money profit?”
4 min	**Live demo**	Bookmark cost, class price vote, profit on screen, stall sim wrong way and right way, model a sale.
7 min	**Plan in teams**	Breakout teams: profit maths, then the stall setup budget sim; choose a product, cost and price.
7 min	**Poster and pitch**	Build along: make the poster, write the pitch, practise it three times, fill the change box.
10 min	**Class market game**	Run the market with play money: half the class sells for 5 minutes while the others shop, then swap. Every sale goes in the sales log.

4 min	**Count up**	Teams count their money and work out profit = sales − costs. Quick competition: best sales log and best change-giving.
3 min	**Probe**	New situation: unsold cards, and the stall words match.
3 min	**Show-and-tell + celebrate**	Teams share their profit and one thing they would change. Course certificates. Exit ticket.

Unplugged warm-up

What would you pay? (4 min): hold up three ordinary classroom items one at a time (a decorated pencil, a paper boat, a bookmark). Learners write the price they would pay on a slip and hold it up. Ask the highest and lowest guessers why. Point out that customers decide whether a price is fair.

Teaching the idea

The capstone brings the whole course together: counting and change (lesson 1), needs and choices (2), budgeting (3–4), saving (5), fair prices and honest ads (6) and trust (7). Teach three words carefully: cost (what you spend to make one), price (what the customer pays) and profit (sales minus all costs). Then run a real class market with play money, where every child is both a seller and a buyer. Celebrate effort and honesty, not just profit: a team that made a small profit and gave perfect change has done brilliantly.

Analogy: A stall is like a mango tree in your garden: the water and care are your costs, the mangoes you sell are your sales, and whatever is left after paying for the care is your profit.

Live demo: 1) Hold up a pretend bookmark: “Card ₹3, paint ₹2, ribbon ₹1. Cost: ₹6.” 2) Ask the class to vote on prices: ₹5, ₹10 or ₹50. Discuss loss, fair and too high. 3) Write on screen: 20 sold × ₹10 = ₹200 sales; costs ₹120; profit ₹80. 4) Open the stall setup sim, add fairy lights and the banner first, and show the change box disappearing. Reset and do needs first. 5) Model a sales pitch and a sale with a volunteer: they pay ₹20 for a ₹10 bookmark and you count up the change.

Questions to ask

Ask	Listen for
What is the difference between cost and price?	Cost is what you spend to make it; price is what the customer pays.
Cost ₹6, price ₹10. What do you earn on one?	₹4.
How do you work out profit?	Money from sales minus all the costs.
What happens if the price is lower than the cost?	You make a loss on every item.
Why keep a change box?	So you can give customers the right change.

Differentiation

Support
Give a ready-made stall card (bookmarks, cost ₹5, price ₹10) so learners focus on selling, change and the sales log rather than planning.

Stretch
If Zoya drops her price to ₹8 and sells 30 bookmarks instead of 20, does she make more profit? (30 × ₹8 = ₹240 sales, costs 30 × ₹6 = ₹180, profit ₹60: less than ₹80!)

Common misconceptions

Misconception	How to fix it
Sales money is all profit.	Take away the costs first. Profit is what is left.
A higher price always means more profit.	If the price is too high, nobody buys.
Unsold items cost nothing.	You already paid to make them. Their cost still counts.
A good ad can say anything to sell.	Be honest. Never promise what your product cannot do.

Assessment

Project rubric (also on the project brief):

Criterion	1 · Beginning	2 · Developing	3 · Secure	4 · Excellent
Cost, price and profit	Cost or price is missing	Cost and price are there, but profit is wrong	Cost, price and profit are all correct	All correct, with working shown, and explains how a different price would change the profit
Poster and pitch	No poster or pitch	A poster or a pitch, but not both	Clear poster and a friendly, honest pitch	Eye-catching poster and a confident, honest pitch used with every customer
Selling and change	Did not sell or gave wrong change often	Sold with help; some change mistakes	Sold on their own and gave correct change	Sold confidently, gave correct change every time and helped a teammate
Sales log and reflection	No sales log	Sales log has gaps	Complete sales log and a short reflection	Complete, neat sales log and a reflection with a clear idea to improve

Exit ticket

You made 10 bookmarks for ₹50 in total and sold all of them at ₹8 each. What is your profit?

Homework

Tell a grown-up about your stall: your product, cost, price and profit. If your family agrees, make two of your product at home and show them.

Answer key — Kitabash activities

1. Profit maths (perform · fill blank)

Answers: 4 · 150 · 60

2. Set up your stall with ₹500 (perform · budget sim)

Must buy: ✂️ Materials to make 25 items, 🖼️ Chart paper and sketch pens, 🏷️ Price board · **Keep at least** ₹100. Materials, chart paper and the price board cost ₹280, leaving ₹220. Keeping ₹100 for change leaves ₹120: balloons and stickers (₹100), or the printed banner. Every extra rupee spent on decoration is a rupee less profit.

3. Stall steps (perform · ordering)

Order: Choose a product → Work out the cost to make one → Set a fair price that is more than the cost → Make the poster and practise your pitch → Sell, give correct change and write each sale in the log → Count the money and work out the profit

4. Stall words: match each word to its meaning (perform · matching)

Cost → Money spent to make the product · Price → What the customer pays · Profit → Money left after taking away the costs · Loss → When the costs are more than the sales money · Customer → The person who buys · Sales pitch → A short, friendly sentence to get people to buy

5. New situation: unsold cards (probe · multiple choice)

Answer: Yes, ₹20 profit: sales of ₹120 minus costs of ₹100

6. Capstone: my mini market stall (probe · project)

Answer key — worksheet

1. **Key words:** cost = The money you spend to make something. · price = What the customer pays for one item. · profit = The money left after you take away all your costs. · loss = When your costs are more than the money from sales.
2. **Profit maths:** 4 · 150 · 60
3. **Set up your stall with ₹500:** Must buy: ✂️ Materials to make 25 items, 🖼️ Chart paper and sketch pens, 🏷️ Price board. Keep at least ₹100. Materials, chart paper and the price board cost ₹280, leaving ₹220. Keeping ₹100 for change leaves ₹120: balloons and stickers (₹100), or the printed banner. Every extra rupee spent on decoration is a rupee less profit.
4. **Stall steps:** 1 Choose a product · 2 Work out the cost to make one · 3 Set a fair price that is more than the cost · 4 Make the poster and practise your pitch · 5 Sell, give correct change and write each sale in the log · 6 Count the money and work out the profit

5. **Stall words: match each word to its meaning:** Cost → Money spent to make the product · Price → What the customer pays · Profit → Money left after taking away the costs · Loss → When the costs are more than the sales money · Customer → The person who buys · Sales pitch → A short, friendly sentence to get people to buy
6. **My plan:** A clear plan that covers every requirement.
7. **Checklist:** All requirements met.
8. **Two stars and a wish:** Kind, specific feedback and an improvement.
