COURSE GUIDE & SYLLABUS · GRADES 6–11 · AGES 11–16

Generative AI (Gr 6–8) Beginner: Gen-AI Creators

Talk to AI like a pro, check what it says, and create real things with it — safely and honestly.

A hands-on first course in generative AI for ages 11–16. Learners find out how chatbots predict the next word, master a prompt formula (Role, Task, Context, Format, plus examples and tone), use AI as an honest study buddy, and learn to catch AI mistakes. Every class makes something real: an "AI or human?" family quiz, an exam-week study planner, a fact-checked practice quiz, an illustrated AI storybook, a club event poster, a Teachable Machine image model, a no-code chatbot instruction sheet, and an AI for Good campaign capstone. Each lesson has a video, a follow-along, Prompt Lab challenges with instant feedback, games, a worksheet, a student project kit and a teacher lesson plan.

What learners will be able to do

- Explain in plain words how a chatbot predicts the next word, and what AI can and cannot do
- Write strong prompts using Role, Task, Context, Format, examples and tone, and improve them with follow-ups
- Use AI as a study buddy (explain, quiz me, Socratic mode) without cheating
- Spot hallucinations and fact-check AI answers against a textbook and trusted sources
- Keep personal information private and label AI-made work honestly
- Write image prompts (subject, style, lighting, colours, composition) and check images for bias
- Train, test and improve an image model in Teachable Machine, and explain why it fails
- Design and test a chatbot's instructions: purpose, personality, rules and refusals
- Plan, create and present an AI for Good campaign with a responsible-AI checklist

How every lesson works

Watch	A short animated explainer video with captions and read-aloud narration.
Learn	Learn cards in plain language, then a step-by-step walkthrough of the real AI tool.
Prompt Lab	Learners write prompts for real tasks and get instant checklist feedback, then copy them into the AI tool and judge the result.
Quick checks	Sorting, ordering and choice questions with instant feedback (spot the hallucination, safe or unsafe, better prompt).
Probe	Apply the skill to a new situation and explain your thinking.
Projects	Every lesson produces something real you keep: a prompt library, a poster, a summary, an assistant. Module projects are reviewed with a rubric.

Printables	Worksheet for every lesson, project brief for every project, project kits (prompt templates) and a teacher lesson plan with answer keys.

Scope and sequence

#	Lesson	Big idea	Learners build
1	**What Is Generative AI?** Explain how a chatbot predicts the next word, say what AI can and cannot do, follow the privacy rules, and write your first three prompts.	Prediction machines	First prompts and an “AI or human?” quiz
2	**The Prompt Formula** Write strong prompts with Role, Task, Context and Format (plus examples and tone), and improve the answer with follow-up messages.	Role · Task · Context · Format	My exam-week study planner
3	**AI as a Study Buddy, Not a Cheat** Use AI to explain, quiz you and coach you with questions, catch hallucinations by checking against your textbook, and follow the honest-use rules.	Learn with AI, check with sources	An AI practice quiz with a fact-check table
4	**Project: My AI Storybook** Co-write a short illustrated story with AI as your helper, design it in Canva, and credit the AI honestly.	Creative co-writing	Project: My AI Storybook
5	**AI Art Director** Write image prompts with subject, style, lighting, colours and composition, check AI images for bias, and follow the rules on copyright and deepfakes to make a club event poster.	Image prompts and bias	Event poster for a school club
6	**Teach a Machine** Train an image model in Google Teachable Machine by collecting examples, then test it, find where it fails and explain why in a data diary.	Machine learning from data	Recycling sorter or rock-paper-scissors detector
7	**Build Your Own AI Helper** Design a chatbot’s instructions — purpose, personality, rules and refusals — then test it with five test conversations and improve it.	Designing chatbot instructions	Homework Hint Bot or Cricket Coach Bot
8	**Capstone: AI for Good Campaign** Pick a real local problem, research it with AI and check facts in two trusted sources, then create and present a poster and a 30-second video script using a responsible-AI checklist.	Responsible AI for good	Project: AI for Good Campaign

Modules

Module 1 · Talk to AI like a pro
How chatbots work, the prompt formula, AI as an honest study buddy, and catching hallucinations. Project: My AI Storybook.

Big question: How do we get AI to help us — and know when it is wrong?

Module 2 · Create and build with AI
Image prompts and bias, teaching a machine with Teachable Machine, designing a chatbot's instructions, and an AI for Good campaign capstone.

Big question: How can we build and create with AI responsibly — for ourselves and our community?

Assessment

Prompt Lab tasks give instant checklist feedback. Quick checks give instant feedback. Written answers and projects are reviewed by the teacher against 4-level rubrics (Beginning · Developing · Secure · Excellent).

What you need

- Laptop, Chromebook or tablet with a modern browser
- The Kitabash Prompt Lab and Kitabash AI helper inside the lesson (learners under 13 use only this, with parent consent, and watch the teacher's screen for other AI tools)
- Ages 13–17, with a parent's permission: ChatGPT, Gemini, Microsoft Copilot or Perplexity (free plans)
- Canva: teacher-led on the shared screen, or the learner's own school or family account
- Google Teachable Machine (teachablemachine.withgoogle.com) — no account needed
- A webcam (optional) for Lesson 6, plus the learner's school textbook for fact-checking

Before you start

- Can read and type simple English sentences
- No coding or AI experience needed

Safety and privacy

Privacy rule, every lesson: never type real names, phone numbers, addresses, passwords, Aadhaar or PAN numbers, school details or private documents and photos into any AI tool. Age rules: learners under 13 use only the Kitabash AI helper in the lesson (with parent consent) and watch the teacher demonstrate other tools; learners 13–17 may use ChatGPT, Gemini, Copilot or Perplexity only with a parent's permission; Claude is 18+ only and is never used by learners. Teachable Machine needs no account; Canva is teacher-led or through a school or family account. AI makes mistakes, so every answer is checked against a trusted source. Honest use: label AI-made work, no cheating on homework, no fake reviews, and no deepfakes or edited images of real people.

What comes next

After this course: **Gen-AI Creators · Level 2 (AI-assisted coding, building AI apps, AI video and music)**.

Kitabash original curriculum. Product names (ChatGPT, Gemini, Claude, Copilot, Canva, NotebookLM, Perplexity, Teachable Machine) belong to their owners; Kitabash is not affiliated with or endorsed by them. Tools and age rules change: check each tool’s current terms before class.
