LESSON PLAN · GENERATIVE AI (GR 6–8) BEGINNER: GEN-AI CREATORS

Lesson 2: The Prompt Formula

Module 1 | 60 minutes | Role · Task · Context · Format | Grades 6–11 · ages 11–16

Objective: Write strong prompts with Role, Task, Context and Format (plus examples and tone), and improve the answer with follow-up messages.

Success criteria

- I can write a prompt with Role, Task, Context and Format.
- I can add an example and a tone.
- I can improve an answer with follow-ups.
- I can check an AI plan's numbers and dates.

Key vocabulary

- **role**: Who you ask the AI to act as, e.g. a study coach.
- **task**: The exact thing you want the AI to make or do.
- **context**: Useful background details, like your grade and exam dates.
- **format**: The shape of the answer, like a table or list.
- **tone**: How the answer should sound, like friendly or formal.
- **iterate**: Improve something step by step with follow-ups.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Project files: l02-study-planner-project-kit.md, l02-teacher-demo-script.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	Human chatbot: a volunteer draws from a vague instruction, then from a formula instruction. Compare.
6 min	**Watch + poll**	Play the video. Poll: "Which part of the formula do you usually forget?" (Role / Task / Context / Format).
7 min	**Live demo**	Vague prompt vs formula prompt on the shared screen; add up the minutes together and catch any mistake.
5 min	**Quick competition**	Match race: match each formula part to its example; fastest correct pair wins. Then Better prompt: A or B by thumbs vote.

10 min	**Prompt Lab**	Learners write their study-planner prompt in the Prompt Lab and improve it until all five items are ticked.
12 min	**Follow-along (pairs)**	Pairs send their prompt to the AI (under 13 via the Kitabash AI helper), check the totals, then send two follow-ups. The improve loop ordering game for early finishers.
6 min	**Show-and-tell**	Three learners share before/after: their first answer and their improved planner. Class names the follow-up that helped most.
5 min	**Probe**	New situation: the wrong total. Discuss the best follow-up.
4 min	**Exit ticket**	Exit ticket in the chat; remind learners to label the planner “Made with help from AI”.

Unplugged warm-up

Human chatbot (5 min): one volunteer is the “chatbot” and must follow instructions exactly. The class first says “Draw an animal.” Then: “You are a cartoonist. Draw a happy elephant wearing a cricket cap, in the middle of the board, in 30 seconds.” Compare the two drawings: which instructions worked better, and why?

Teaching the idea

Prompts work best when they remove guessing. The formula is Role (who the AI should act as), Task (exactly what to make), Context (the background that makes it personal — described generally, never with real names or school details), and Format (table, list, length). Two power-ups: give an example of the pattern you want, and set the tone. The most important habit is iteration: the first reply is a draft, so read, check and send follow-ups. Today’s check moment: AI often gets totals and dates wrong, so learners add up their planner themselves.

Analogy: Ordering at a dosa stall: “One dosa” gets you something. “One crispy masala dosa, less spicy, extra chutney, to take away” gets you exactly what you want.

Live demo: On the shared screen: 1) Type “Make a study plan.” Read the vague reply aloud and ask: “Would this help you?” 2) Build the formula prompt live, colour-coding each part on a slide (Role blue, Task green, Context orange, Format purple, Tone pink). Send it. 3) Add up the minutes with the class. If the total is wrong, say “Caught it!” and send: “Please add up the minutes again and fix the total.” If it is right, say “Good — but we always check”, and change one number on purpose to show how you would spot it. 4) Send a follow-up: “Make Saturday lighter because I have cricket practice.” Show how the plan changes.

Questions to ask

Ask	Listen for
What are the four parts of the formula?	Role, Task, Context, Format.
Why does context help?	The AI can make the answer fit you instead of being general.

How can you give context without sharing personal information?	Describe yourself generally: grade, subjects, times — no names or school.
What is a follow-up?	A second message that asks the AI to fix or improve its answer.
What should you check in an AI study plan?	Totals, days and dates, and whether it fits your real week.

Differentiation

Support
Give a fill-in-the-gaps prompt frame: “You are a ___. Make a ___. I am in Grade ___ and my exams are ___. Show it as a ___. Keep it ___.”

Stretch
Add an example to your prompt (one sample row of the table) and compare the answer with and without it. Which is better, and why?

Common misconceptions

Misconception	How to fix it
Longer prompts are always better	Clear beats long. Include the parts that matter: Role, Task, Context, Format.
If the first answer is bad, AI cannot help	Send a follow-up. Most great answers come after two or three messages.
Context means telling it my name and school	Context is general background: grade, subjects, dates. Keep personal details private.
AI is good at maths, so I do not need to check totals	AI chatbots often make small arithmetic slips. Check numbers yourself.

Assessment

Use the Prompt Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
Turn “help with science” into a formula prompt with a Role, Task, Context and Format.

Homework
Use your study planner for two days. Write one follow-up prompt that would make it fit your real week better.

Answer key — Kitabash activities

1. Prompt Lab: my study planner (perform · ai lab)

Checklist: Role — who the AI should be · Task — what to make · Context — your grade, subjects or time · Format — the shape of the answer · Tone — how it should sound

Strong example:

```
You are a friendly study coach. Make a 5-day revision plan for my exam week. I am in Grade 8. My exams are Maths on Monday, Science on Wednesday and Hindi on Friday, and I can study 2 hours each evening. Show it as a table with the columns Day, Subject, Topic and Minutes, with a 10-minute break every hour. Keep the tone encouraging and simple.
```

2. Match each part of the formula to its example (perform · matching)

Role → You are a patient maths tutor. · Task → Make a 5-day revision plan. · Context → I am in Grade 7 and my Science exam is on Monday. · Format → Show it as a table with Day, Subject and Minutes. · Tone → Keep it encouraging and simple.

3. Better prompt: A or B? (perform · multiple choice)

Answer: B: “You are a fun science teacher. Make a short rhyme to help a Grade 6 student remember the 8 planets in order from the Sun. Keep it to 4 lines.”

4. The improve loop (perform · ordering)

Order: Write a prompt using the formula → Read the AI’s answer → Check it — facts, numbers and dates → Send a follow-up to fix or improve it → Use it and label it as AI-helped

5. New situation: the wrong total (probe · multiple choice)

Answer: “Please add up the minutes again and fix the total. Also show the total for each day.”

Answer key — worksheet

1. **Key words:** role = Who you ask the AI to act as, e.g. a study coach. · task = The exact thing you want the AI to make or do. · context = Useful background details, like your grade and exam dates. · format = The shape of the answer, like a table or list.
2. **Prompt Lab: my study planner:** Include: Role — who the AI should be; Task — what to make; Context — your grade, subjects or time; Format — the shape of the answer; Tone — how it should sound. Example: You are a friendly study coach. Make a 5-day revision plan for my exam week. I am in Grade 8. My exams are Maths on Monday, Science on Wednesday and Hindi on Friday, and I can study 2 hours each evening. Show it as a table with the columns Day, Subject, Topic and Minutes, with a 10-minute break every hour. Keep the tone encouraging and simple.

3. **Match each part of the formula to its example:** Role → You are a patient maths tutor. · Task → Make a 5-day revision plan. · Context → I am in Grade 7 and my Science exam is on Monday. · Format → Show it as a table with Day, Subject and Minutes. · Tone → Keep it encouraging and simple.
4. **Better prompt: A or B?:** B. B: “You are a fun science teacher. Make a short rhyme to help a Grade 6 student remember the 8 planets in order from the Sun. Keep it to 4 lines.” — B has a role, a clear task, context (Grade 6, in order), a format (4-line rhyme) and a tone (fun).
5. **The improve loop:** 1 Write a prompt using the formula · 2 Read the AI’s answer · 3 Check it — facts, numbers and dates · 4 Send a follow-up to fix or improve it · 5 Use it and label it as AI-helped
