LESSON PLAN · GENERATIVE AI (GR 6–8) BEGINNER: GEN-AI CREATORS

Lesson 5: AI Art Director

Module 2 | 60 minutes | Image prompts and bias | Grades 6–11 · ages 11–16

Objective: Write image prompts with subject, style, lighting, colours and composition, check AI images for bias, and follow the rules on copyright and deepfakes to make a club event poster.

Success criteria

- I can write an image prompt with subject, style, lighting, colours and composition.
- I can do a bias check and write an inclusive prompt.
- I can explain the rules on copyright and deepfakes.
- I can finish and label an AI poster in Canva.

Key vocabulary

- **image prompt**: A text description an AI turns into a picture.
- **style**: How the picture is drawn, like cartoon or watercolour.
- **composition**: Where things are placed in the picture.
- **bias**: An unfair pattern, like always showing one kind of person.
- **copyright**: The rule that creative work belongs to the person who made it.
- **deepfake**: A fake picture, video or voice made to look like a real person.

You will need

- Projector or screen share with Kitabash and the AI tools for this lesson
- Devices: 1 per learner (laptop, tablet or phone)
- Learner accounts only where allowed: see the course safety notes
- Printed worksheet (optional)
- Project files: l05-event-poster-project-kit.md, l05-teacher-demo-script.md

Timed lesson plan (60 min)

Time	Stage	What happens
5 min	**Warm-up game**	Draw what I say: back-to-back pairs describe and draw; compare which details worked.
6 min	**Watch + poll**	Play the video. Poll: “Which image-prompt part did you forget in the warm-up?”
8 min	**Live demo**	Build a prompt one part at a time, run the doctor bias check, and show the AI spelling problem; finish the title in Canva.
5 min	**Quick competition**	Match race on image-prompt parts, then the OK or not OK sort by thumbs vote.

8 min	**Prompt Lab**	Learners write their club poster image prompt and tick all five parts. Bias check mcq for early finishers.
14 min	**Build (breakouts)**	Breakouts: make the image (under-13s post prompts in chat; teacher generates and shares), bias-check it, design the poster in Canva with checked text and an AI label.
6 min	**Show-and-tell**	Poster gallery walk on the shared screen: each learner names one prompt detail that made a difference. Class votes on “most eye-catching”.
4 min	**Probe**	New situation: the spelling mistake.
4 min	**Exit ticket**	Exit ticket in the chat.

Unplugged warm-up

Draw what I say (5 min): pairs sit back to back. One describes a simple picture (“a kite in the top left, a tree on the right, sunset colours”); the other draws it without seeing. Swap. Which details made the drawing match? Those are the parts of an image prompt.

Teaching the idea

Image generators turn a text description into a picture, so the art director’s job is to describe precisely: subject (who/what, doing what), style, lighting, colours and composition. Today’s check moments: (1) bias — image models learned from existing pictures and often repeat stereotypes, so learners test “a doctor” or “an engineer” and then write inclusive prompts; (2) text — image tools often misspell words, so add text in Canva. Rules: no copying others’ characters or logos, no deepfakes or edited images of real people, label AI images. Under-13s write prompts and the teacher generates; 13+ may use Gemini or Canva’s AI image app with a parent’s permission.

Analogy: You are a film director talking to a set designer over the phone: they can only build what you describe, so every detail you leave out, they guess.

Live demo: On the shared screen (your adult account in Gemini or Canva’s AI image app): 1) Type “a poster” and show the random result. 2) Build the full prompt with the class, adding one part at a time (subject, style, lighting, colours, composition) and regenerating so learners see each part’s effect. 3) Bias check: generate “a doctor” three or four times; ask “Who do you see? Who is missing?” Then generate “a young woman doctor from Kerala, smiling, in a busy clinic”. 4) Ask for a poster with text and show the spelling mistakes (if it spells correctly this time, say so honestly — it often does not). Then open Canva and add the title yourself.

Questions to ask

Ask	Listen for
Name the five parts of an image prompt.	Subject, style, lighting, colours, composition.
Why ask for “no text in the image”?	AI often misspells words; add text in Canva.

What is a bias check?	Testing whether AI pictures leave people out, then fixing the prompt.
Why should you never make a fake picture of a real person?	It can fool people and hurt or embarrass them; it is not allowed.
How do you label an AI image?	Write “Image made with AI” on it.

Differentiation

Support
Give a five-box prompt builder (subject / style / lighting / colours / composition) with picture examples for each box.

Stretch
Make two versions of the poster in different styles and run a class poll to see which grabs attention faster.

Common misconceptions

Misconception	How to fix it
AI pictures are fair because a computer made them	AI learned from human pictures and can repeat stereotypes. Always do a bias check.
AI can write any words on a poster	Image tools often misspell text. Add words yourself in Canva.
If AI made it, I can copy any character	Famous characters and logos belong to their owners. Design your own.
A funny fake photo of a friend is harmless	Fake images of real people can hurt and spread. Never make them.

Assessment

Use the Prompt Lab results (auto-checked), the quick checks and the Probe answers. Written answers arrive in your review queue.

Exit ticket
Write one image prompt that includes all five parts, and one rule about real people in AI images.

Homework
Show your poster to someone at home. Ask them: “What do you notice first?” Write one prompt change that would make that part even better.

Answer key — Kitabash activities

1. Prompt Lab: poster image (perform · ai lab)

Checklist: Subject — who or what, doing what · Style · Lighting · Colours · Composition — where things go

Strong example:

```
A bright cartoon poster showing girls and boys of different backgrounds planting trees
in a school garden. Soft sunrise light. Colours: green, yellow and white. The children
are in the foreground, with empty space at the top for a title. No text in the image.
```

2. Match each image-prompt part to its example (perform · matching)

Subject → Three kids flying kites on a rooftop · Style → Watercolour storybook style · Lighting → Golden evening light · Colours → Orange, pink and sky blue · Composition → Kites in the top half, kids at the bottom

3. OK to make, or not OK? (perform · categorize)

OK to make: An Eco Club poster with AI-drawn cartoon kids, A watercolour picture of a monsoon street, labelled “made with AI”, Your own robot mascot design for the Robotics Club
Not OK: A fake photo of a famous cricketer praising your club, A funny edited picture of a classmate, A poster that copies a famous cartoon character to sell T-shirts

4. Bias check (perform · multiple choice)

Answer: Write a more inclusive prompt, e.g. “a young woman engineer testing a solar panel”, and check again

5. New situation: the spelling mistake (probe · multiple choice)

Answer: Ask the AI for the same picture with no text, then type the words herself in Canva and check the spelling

Answer key — worksheet

1. **Key words:** image prompt = A text description an AI turns into a picture. · style = How the picture is drawn, like cartoon or watercolour. · composition = Where things are placed in the picture. · bias = An unfair pattern, like always showing one kind of person.
2. **Prompt Lab: poster image:** Include: Subject — who or what, doing what; Style; Lighting; Colours; Composition — where things go. Example: A bright cartoon poster showing girls and boys of different backgrounds planting trees in a school garden. Soft sunrise light. Colours: green, yellow and white. The children are in the foreground, with empty space at the top for a title. No text in the image.

3. **Match each image-prompt part to its example:** Subject → Three kids flying kites on a rooftop · Style → Watercolour storybook style · Lighting → Golden evening light · Colours → Orange, pink and sky blue · Composition → Kites in the top half, kids at the bottom
4. **OK to make, or not OK?:** OK to make: An Eco Club poster with AI-drawn cartoon kids, A watercolour picture of a monsoon street, labelled “made with AI”, Your own robot mascot design for the Robotics Club · Not OK: A fake photo of a famous cricketer praising your club, A funny edited picture of a classmate, A poster that copies a famous cartoon character to sell T-shirts
5. **Bias check:** B. Write a more inclusive prompt, e.g. “a young woman engineer testing a solar panel”, and check again — The AI repeated a pattern from its data. As art director, you describe exactly who you want so everyone is included.
