COURSE GUIDE & SYLLABUS · GRADES 7–11 · AGES 12–16

Generative AI (Gr 6–8) Intermediate: Gen-AI Creators · Level 2

Code with an AI partner, check AI data, make responsible media and build tested AI apps.

The second Gen-AI Creators course for ages 12–16. Learners who can already prompt well and catch AI mistakes now put AI to work as a coding coach and a building tool. In Module 1 they ask AI to explain code line by line, debug with clear bug reports, plan programs in pseudocode and build an AI-assisted mini game with an honest “what AI did” log. In Module 2 they summarise and chart a class survey (checking every number), plan a 30-second explainer video with consent and copyright rules, design and test a no-code AI app with attack test cases, and pitch an AI-powered solution for their school. Every lesson has a video, a follow-along, Prompt Lab challenges, games, a worksheet, a student project kit and a teacher demo script.

What learners will be able to do

- Ask AI to explain code line by line, and run code to catch AI explanation mistakes
- Write clear bug reports (expected, actual, error, tried), test every AI fix and explain why bugs happen
- Turn an idea into pseudocode, get an AI plan review and build a quiz game yourself
- Build a mini game with AI as a coach and keep an honest “what AI did” log
- Run an anonymous survey, summarise it with AI, chart it in a spreadsheet and check every number
- Plan a 30-second explainer with a checked script and storyboard, following consent, no-deepfake and music copyright rules
- Design a no-code AI app with a spec, safety rules and a test log including attack tests
- Prototype, test, ethics-check and pitch an AI-powered solution for your school

How every lesson works

Watch	A short animated explainer video with captions and read-aloud narration.
Learn	Learn cards in plain language, then a step-by-step walkthrough of the real AI tool.
Prompt Lab	Learners write prompts for real tasks and get instant checklist feedback, then copy them into the AI tool and judge the result.
Quick checks	Sorting, ordering and choice questions with instant feedback (spot the hallucination, safe or unsafe, better prompt).
Probe	Apply the skill to a new situation and explain your thinking.

Projects	Every lesson produces something real you keep: a prompt library, a poster, a summary, an assistant. Module projects are reviewed with a rubric.
Printables	Worksheet for every lesson, project brief for every project, project kits (prompt templates) and a teacher lesson plan with answer keys.

Scope and sequence

#	Lesson	Big idea	Learners build
1	**AI as a Coding Buddy** Ask an AI to explain code line by line instead of writing it for you, then run the code yourself to catch the AI's mistakes.	Explain, don't write	My "explain my code" log
2	**Debugging with AI** Write a clear bug report for an AI — what you expected, what happened and the exact error — then test the fix and explain why the bug happened.	Describe · Share · Test · Understand	Fix three buggy programs
3	**Planning a Program with AI** Turn a game idea into pseudocode steps, ask an AI to review your plan, then build and test the quiz game yourself.	Idea → pseudocode → code	Plan and build a quiz game
4	**Project: AI-Assisted Mini Game** Plan, code and test your own mini game, using AI only to explain and debug, and keep an honest log of exactly what the AI did.	You code, AI coaches	Project: AI-Assisted Mini Game
5	**AI for Data** Run an anonymous class survey, ask an AI to summarise the results, make the chart yourself in a spreadsheet and check every number.	Survey · Summarise · Chart · Check	Class survey report with a chart
6	**AI Audio and Video** Plan a 30-second explainer video with a checked script, a storyboard, your own voice and properly licensed music, following the consent and no-deepfake rules.	Script · Storyboard · Consent	30-second explainer: plan, script and storyboard
7	**Build a No-Code AI App** Design a no-code AI app's instructions, inputs, outputs and safety rules, then run a test log with normal, tricky and attack test cases and fix what fails.	Spec · Build · Test	Exam Revision Buddy: spec and test log
8	**Capstone: AI for Our School** Design, prototype, test and pitch an AI-powered helper that solves a real problem at your school, with an ethics check and an honest AI log.	Problem → prototype → pitch	Project: AI for Our School

Modules

Module 1 · Code with an AI partner
AI as a coding buddy, debugging with bug reports, planning programs in pseudocode, and an AI-assisted mini game with an honest “what AI did” log.

Big question: How can AI make me a better programmer without doing the programming for me?

Module 2 · Make media and apps responsibly
AI for data and charts, audio and video with consent and copyright, a tested no-code AI app, and a capstone AI solution for your school.

Big question: How do we build AI-powered things that are useful, tested and fair?

Assessment

Prompt Lab tasks give instant checklist feedback. Quick checks give instant feedback. Written answers and projects are reviewed by the teacher against 4-level rubrics (Beginning · Developing · Secure · Excellent).

What you need

- Laptop or Chromebook with a modern browser
- The Kitabash Python Lab, Prompt Lab and Kitabash AI helper inside the lesson (learners under 13 use only the AI helper, with parent consent, and watch the teacher’s screen for other AI tools)
- Ages 13–17, with a parent’s permission: ChatGPT, Gemini, Microsoft Copilot or Perplexity (free plans)
- Scratch (scratch.mit.edu) — projects can be made without an account and saved to the device
- A spreadsheet (Google Sheets or Excel) through a school or family account, or the teacher’s shared screen
- Canva: teacher-led on the shared screen, or the learner’s school or family account

Before you start

- Gen-AI Creators Level 1 (or equivalent: can write prompts with Role, Task, Context, Format and fact-check AI answers)
- Basic typing; no coding experience required, though some Python or Scratch helps

Safety and privacy

Privacy rule, every lesson: never type or paste real names, phone numbers, addresses, passwords, Aadhaar or PAN numbers, school details or private documents and photos into any AI tool — including inside code or survey data (use counts and codes, not names). Age rules: under 13 use only the Kitabash AI helper (with parent consent) and watch the teacher demonstrate other tools; 13–17 may use ChatGPT, Gemini, Copilot or Perplexity only with a parent’s permission; Claude is 18+ only and is never used by learners. AI makes mistakes in code, maths and facts, so every

output is run, tested or checked. Honest use: learners write their own code, keep a log of AI help and label AI-assisted work. Media: consent before filming or recording anyone, no deepfakes or voice copies of real people, and only properly licensed music.

What comes next

After this course: **Gen-AI Creators · Level 3 (AI apps with code)**.

Kitabash original curriculum. Product names (ChatGPT, Gemini, Claude, Copilot, Canva, NotebookLM, Perplexity, Teachable Machine) belong to their owners; Kitabash is not affiliated with or endorsed by them. Tools and age rules change: check each tool’s current terms before class.
