Lesson 3: Planning a Program with AI

Module 1 | 60 minutes | Idea → pseudocode → code | Grades 7–11 · ages 12–16

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. pseudocode ___ A. A variable that counts points, starting at 0.
b. input ___ B. Do one thing if something is true, otherwise do another.
c. if / else ___ C. Information the player types in; input() in Python, ask and wait in Scratch.
d. score variable ___ D. A program written as plain English steps.

2. Prompt Lab: review my plan

Write a prompt asking an AI to review YOUR pseudocode for a quiz game. Say what the game does, paste your steps (use [my steps]), ask it to find missing steps or edge cases, and tell it not to write any code. Write your prompt here, then try it in Kitabash AI helper or ChatGPT or Gemini or Copilot.

3. Order the plan

Put the pseudocode for one quiz question in order. Number them 1–5.

a. ___ Otherwise, show the right answer
b. ___ If the answer is right, say Correct and add 1 to score
c. ___ Ask the question and store the answer
d. ___ Set score to 0
e. ___ After all questions, show the final score

4. Plan your program

Before you type it: Build a 3-question quiz in Python. Start score at 0, ask each question with input(), use if/else to check the answer and add 1 to score when it is right, and finish by printing `Your score: ... out of 3`. Use the questions from the starter (capital of India, players in a cricket team, festival of lights) so the checker can test it. Write the steps in plain English (pseudocode), then the Python you will use.

5. Who should do it: you or the AI?

Write each item in the right group: You do it / AI can help.

a. Choose the game idea → _____
b. Spot missing steps in your plan → _____
c. Type the Python code → _____
d. Suggest tricky test cases → _____
e. Run the tests and record results → _____
f. Explain an error message → _____

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can turn an idea into pseudocode steps.
☐ I can ask an AI to review my plan without writing my code.
☐ I can find a missing step by tracing a plan.
☐ I can build and test a quiz game one step at a time.
