Lesson 4: Project: AI-Assisted Mini Game

Module 1 | 60 minutes | You code, AI coaches | Grades 7–11 · ages 12–16

Name: Class: Date:

Plan your project and practise the key ideas.

1. Key words

Match each word to what it means. Write the letter.

a. mini game ___ A. Python: a random whole number from a to b, both included.
b. what-AI-did log ___ B. Playing your game with chosen inputs to check it works.
c. player test ___ C. A record of each time you used AI: asked, said, checked, result.
d. random.randint(a, b) ___ D. A small game with a clear goal and ending.

2. Prompt Lab: an honest log entry

Write one honest what-AI-did log entry for your game. Include what you asked the AI, what it said, how you checked it, the result (right or wrong), and what you changed in your own code. Write your prompt here, then try it in Kitabash Prompt Lab or my project log.

3. Honest log or not OK?

Write each item in the right group: Honest and OK / Not OK.

a. “AI explained randint; I tested it and it was wrong.” → _____
b. Pasting a whole AI-written game and logging nothing → _____
c. “AI suggested swapping two lines; I did it and tested it.” → _____
d. Leaving out the times the AI was wrong to look clever → _____
e. “Line 12 idea came from AI — I can explain it.” → _____
f. Saying “I wrote all of it” when AI wrote the loop → _____

4. The project route

Put the project route in order. Number them 1–6.

a. ___ Run five player tests
b. ___ Add the score and ending
c. ___ Build the core and run it
d. ___ Ask the AI to review the plan
e. ___ Write the idea and pseudocode
f. ___ Explain every line and submit

5. New situation: the “better version”

Zoya’s AI offers: “Here is a complete, better version of your game!” It has features she has not learned yet. What is the honest choice? Circle one.

a. A. Paste it in and submit — it is better
b. B. Say no thanks, ask for a hint on just one feature, and build it herself
c. C. Paste it in but do not mention it in her log
d. D. Submit both versions and let the teacher pick

6. My plan

Plan your project: Plan, code and test your own mini game in Python or Scratch, using AI only to review, explain and debug — with an honest log of exactly what the AI did. Sketch it and list what each part will do.

7. Checklist

Tick each one when your project does it.

a. ☐ One-sentence idea and a pseudocode plan reviewed by AI
b. ☐ A working game with a score or a win/lose ending
c. ☐ At least 3 what-AI-did log entries (asked, said, checked, result)
d. ☐ At least 5 player tests recorded
e. ☐ Any AI-suggested line is labelled and explained
f. ☐ You can explain every line of your code

8. Two stars and a wish

Ask a friend to test your project. Write two things they liked and one idea to improve it.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can plan and build a small game with AI as a coach.
☐ I can keep an honest what-AI-did log.
☐ I can test my game with five player tests.
☐ I can explain every line of my code.
