WORKSHEET · PYTHON (GR 6–8) BEGINNER: PYTHON GAME CODERS

Lesson 1: Hello, Python!

Module 1 | 60 minutes | print, strings, comments | Grades 6–10 · ages 11–15

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. program ___ A. A note that starts with #. Python skips it.
b. print() ___ B. Text inside quote marks, like "Hello".
c. string ___ C. The command that shows text on the screen.
d. comment ___ D. A list of instructions the computer follows in order.

2. Plan your program

Before you type it: Say hello to Python! Print exactly three lines: first `Hello, Python!`, then `My name is ...` with your name, then `I like ...` with something you like. Add at least one comment that starts with #. Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: comments

What will this program show on the screen? Code: # Team list ⏎ print("Cricket") ⏎ # print("Football") ⏎ print("Kabaddi")

a. A. Cricket and Kabaddi on two lines
b. B. Cricket, Football and Kabaddi on three lines
c. C. Team list, Cricket and Kabaddi
d. D. Nothing, because of the # signs

4. Match each piece of Python to its job

Draw a line from each word to its match.

a. print("Hi") ..... A. A string that can cover many lines
b. "Hi" ..... B. A comment that Python skips
c. # Hi ..... C. A string: text in quotes
d. """Hi""" ..... D. Shows Hi on the screen

5. Plan your program

Before you type it: Spot the bugs! This welcome screen has three mistakes. Fix them so it prints the three lines: `Welcome to the match!`, `India vs Australia`, `Toss: India won`. Write the steps in plain English (pseudocode), then the Python you will use.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can use print() to show text on the screen.
☐ I can explain what a string is and close every quote.
☐ I can write a comment with #.
☐ I can fix a simple syntax error by reading the message.
