WORKSHEET · PYTHON (GR 6–8) BEGINNER: PYTHON GAME CODERS

Lesson 2: Variables and Input

Module 1 | 60 minutes | variables, input, f-strings | Grades 6–10 · ages 11–15

Name: Class: Date:

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. variable ___ A. A string with f in front, where {name} is replaced by the variable's value.
b. assign ___ B. Asks the user a question and waits for an answer.
c. input() ___ C. Put a value into a variable with =.
d. f-string ___ D. A named box that stores a value.

2. Plan your program

Before you type it: Make a greeting bot. Ask for the user's name, then ask for their city. Then print one line with an f-string in this pattern: `Hi Zoya from Pune!` Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: changing boxes

What does this program print? Code: snack = "samosa" ↵ snack = "vada pav" ↵ print(f"I want {snack}!")

a. A. I want vada pav!
b. B. I want samosa!
c. C. I want samosa vada pav!
d. D. I want {snack}!

4. Will Python accept this variable name?

Write each item in the right group: Works in Python / Breaks Python.

a. player_name → _____
b. total2 → _____
c. score → _____
d. 2total → _____
e. my name → _____
f. first-name → _____

5. Plan your program

Before you type it: Debug it! This program should print `Hello Riya!` and then `You are 12 years old.` when Riya types her name and age. It has two bugs. Fix them. Write the steps in plain English (pseudocode), then the Python you will use.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can store a value in a variable and use it again.
☐ I can ask the user a question with input().
☐ I can use an f-string to put variables into a sentence.
☐ I can choose good variable names.
