Lesson 4: Project: Quiz Show

Module 1 | 60 minutes | score variables and decisions | Grades 6–10 · ages 11–15

Name: _____ Class: _____ Date: _____

Plan your project and practise the key ideas.

1. Key words

Match each word to what it means. Write the letter.

a. score variable ___ A. Removes extra spaces from the start and end of text.
b. += ___ B. Turns text into small letters.
c. .lower() ___ C. Adds to a variable: score += 1 means score = score + 1.
d. .strip() ___ D. A variable that counts points during a game.

2. Plan your program

Before you type it: One perfect question. Start with score = 0. Ask “Which planet is called the Red Planet?”. If the answer is mars (in any capitals, with or without extra spaces), print Correct and add 1 to score. Otherwise, print the right answer. Finally print the score. Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: score keeper

What does this program print? Code: score = 0 ↵ score += 1 ↵ score += 1 ↵ score = score + 2 ↵ print("Score:", score)

a. A. Score: 4
b. B. Score: 2
c. C. Score: 1
d. D. Score: score

4. Plan the quiz

Put the steps of a quiz program in order Number them 1–6.

a. ___ Repeat for every question
b. ___ Check it with if / else and add 1 if right
c. ___ Clean the answer with .strip().lower()
d. ___ Ask a question with input()
e. ___ Set score = 0
f. ___ Print the final score and grade

5. Plan your program

Before you type it: Debug it! This grade calculator gives “Good try” to everyone, even a perfect 5. Fix the order of the checks so 5 gets `Quiz Champion`, 4 gets `Star`, 2 or 3 gets `Good try`, and add an else that prints `Keep practising` for 0 or 1. Write the steps in plain English (pseudocode), then the Python you will use.

6. My plan

Plan your project: Build a five-question quiz game on a topic you love. It keeps score, gives feedback after every answer and awards a final grade. Sketch it and list what each part will do.

7. Checklist

Tick each one when your project does it.

a. ☐ 5 questions on one topic
b. ☐ A score variable that starts at 0 and goes up with +=
c. ☐ Feedback after every answer
d. ☐ Answers accepted in any capitals with .lower()
e. ☐ Final score out of 5 and a grade with if / elif / else
f. ☐ A title screen and a “Made by” comment

8. Two stars and a wish

Ask a friend to test your project. Write two things they liked and one idea to improve it.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can keep score with a variable and +=.
☐ I can check answers with if / else and give feedback.
☐ I can accept answers in any capitals with .lower() and .strip().
☐ I can give a final grade with if / elif / else in the right order.
