WORKSHEET · PYTHON (GR 6–8) BEGINNER: PYTHON GAME CODERS

Lesson 6: Random and Games

Module 2 | 60 minutes | random, game loops | Grades 6–10 · ages 11–15

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. module ___ A. Picks one random item from a list.
b. import ___ B. A random whole number from a to b, both included.
c. randint(a, b) ___ C. Loads a module so you can use it.
d. choice(list) ___ D. A toolbox of extra commands, opened with import.

2. Plan your program

Before you type it: Dice roller. Import random, roll two dice with random.randint(1, 6), print each die and then `Total: ...`. If the two dice are the same, print `Doubles!`. Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: what can randint give?

Which of these could this program NEVER print? Code: import random ↵ n = random.randint(1, 3) ↵ print(n * 10)

a. A. 40
b. B. 10
c. C. 20
d. D. 30

4. Match each line of code to what it does

Draw a line from each word to its match.

a. import random ..... A. Keeps going until the guess is right
b. random.randint(1, 6) ..... B. Adds one to the try counter
c. random.choice(moves) ..... C. Picks one item from a list
d. attempts += 1 ..... D. A whole number from 1 to 6
e. while guess != secret: ..... E. Opens the random toolbox

5. Plan your program

Before you type it: Debug it! This guessing game crashes on the first guess, and it also says “Too low!” when you are right. Fix both bugs so the player can guess and the game ends with `You got it in ... tries!`. Write the steps in plain English (pseudocode), then the Python you will use.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can import the random module.
☐ I can use randint and choice in a program.
☐ I can build a game loop with a while loop and a counter.
☐ I can give hints with if / elif / else.
