Lesson 5: Dictionaries: Look It Up

Module 2 | 60 minutes | dictionaries, keys, values | Grades 7–11 · ages 12–16

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. dictionary ___ A. Gives every key and value pair, for looping.
b. key ___ B. The information stored with a key, like 10.
c. value ___ C. The label you look up, like "chai". Keys are unique.
d. .items() ___ D. A collection of key: value pairs inside { }.

2. Plan your program

Before you type it: Canteen price checker. Use the menu dictionary given. Ask the user what they want. If it is on the menu, print its price like `Rs 10`. If not, print `Sorry, that is not on the menu.` Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: class election

What does this program print? Code: votes = {"Aarav": 3, "Meera": 5} ↵ votes["Aarav"] += 2 ↵ votes["Zoya"] = 1 ↵ print(len(votes), votes["Aarav"])

a. A. 3 5
b. B. 2 5
c. C. 3 3
d. D. 2 3

4. Match each piece of dictionary code to what it does

Draw a line from each word to its match.

a. menu["chai"] ..... A. Reads a value, or 0 if the key is missing
b. menu["chai"] = 12 ..... B. Gives every key and value pair
c. "chai" in menu ..... C. Checks if the key chai exists
d. menu.items() ..... D. Adds chai or changes its value
e. menu.get("tea", 0) ..... E. Reads the value for the key chai

5. Plan your program

Before you type it: Debug it! This report card should print `Maths mark: 85`, then every subject with its mark, then `Total: 319`. It has two bugs. Fix them. Write the steps in plain English (pseudocode), then the Python you will use.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can make a dictionary of key: value pairs.
☐ I can look up, add and update a value by its key.
☐ I can check a key exists with in before using it.
☐ I can loop over a dictionary with .items().
