Lesson 6: Strings in Depth: Hangman

Module 2 | 60 minutes | slicing, string methods, in | Grades 7–11 · ages 12–16

Name: _____ Class: _____ Date: _____

Practise what you learned today. Read each task carefully.

1. Key words

Match each word to what it means. Write the letter.

a. index ___ A. Cannot be changed; strings are immutable, so we build new ones.
b. slice ___ B. A command attached to a value with a dot, like word.upper().
c. method ___ C. A piece of a string, like word[0:3].
d. immutable ___ D. The position number of a letter, starting at 0.

2. Plan your program

Before you type it: Word tools. Write count_vowels(word) that RETURNS how many vowels (a, e, i, o, u) a word has, in capitals or small letters. Then write is_palindrome(word) that returns True if the word reads the same backwards (ignoring capitals), and False otherwise. Write the steps in plain English (pseudocode), then the Python you will use.

3. Predict the output: slice and lower

What does this program print? Code: word = "DIWALI" ↵ print(word[0:3].lower() + word[-1])

a. A. diwl
b. B. DIWI
c. C. diwi
d. D. diwal

4. Match each expression to its result when s = "monsoon"

Draw a line from each word to its match.

a. s[0] ..... A. "MONSOON"
b. s[-1] ..... B. 7
c. s[1:4] ..... C. "noosnom"
d. s[::-1] ..... D. "ons"
e. len(s) ..... E. "n"
f. s.upper() ..... F. "m"

5. Plan your program

Before you type it: Debug it! This hashtag maker should turn `diwali sale today` into `#DiwaliSaleToday`. It has two bugs (look closely at the brackets). Fix them. Write the steps in plain English (pseudocode), then the Python you will use.

How did it go? Colour a face: 😀 I can do it · 🙂 Nearly there · 🤔 I need help

☐ I can use indexes and slices to get parts of a string.
☐ I can use string methods like upper, replace, count and split.
☐ I can loop over the letters of a word and use in to search text.
☐ I can build a new string piece by piece.
