COURSE GUIDE & SYLLABUS · GRADES 6–11 · AGES 11–16

Web Development (Gr 6–8) Beginner: Web Creators · Level 1

Type real HTML, CSS and JavaScript and build a new web page in every class.

A first course in real web development for ages 11–16. In eight live classes learners go from their first <h1> tag to a complete one-page website for a local cause or mini business. Every class builds a real page in the Kitabash Web Lab with a live preview: an “All about me” page of favourite things, a cricket team or recipe page with lists, links and pictures, a styled school event poster, a three-section fan or club page, a Top 5 card gallery with flexbox, an accessible feedback form, a cricket score counter or click-the-mango game in JavaScript, and a capstone website with a gallery, a form and an interactive button. Each lesson has a short video that shows the code and what it does, a build-along, auto-checked Web Lab challenges, a predict-the-page puzzle, a spot-the-bug challenge, games, a worksheet and a full teacher lesson plan. Safe web habits are built in: alt text, crediting images and never sharing personal details.

What learners will be able to do

- Explain how a browser reads an HTML file and draws a page
- Write headings, paragraphs, lists, links and images with helpful alt text
- Style pages with CSS: colours, fonts, padding, borders and margins
- Use class selectors and flexbox to build card layouts
- Build accessible forms with labels, inputs and buttons that respect privacy
- Write JavaScript that responds to clicks, changes text and colour, and keeps score
- Plan, build, test and launch a one-page website with navigation, a gallery, a form and an interactive button
- Practise safe web habits: alt text, crediting images, honest content and no personal details

How every lesson works

Watch	A short animated explainer video with captions and read-aloud narration.
Learn	Learn cards with real HTML, CSS and JavaScript, and a type-along build.
Web Lab	Write code in the browser with a live preview. Challenges are checked automatically; hints unlock one at a time.
Quick checks	Spot-the-bug and predict-the-page questions with instant feedback.
Probe	Fix and extend a page to show real understanding.
Projects	A real web page every module. Starter page for learners and a model page for the teacher.

Printables	Worksheet for every lesson, project brief for every project and a teacher lesson plan with answer keys.

Scope and sequence

#	Lesson	Big idea	Learners build
1	**Hello, web!** Write your first web page in HTML with headings and paragraphs, and explain how a browser reads tags.	tags, headings, paragraphs	Build along: my first web page
2	**Lists, links and images** Add bulleted and numbered lists, links and images with alt text to a web page, and credit the pictures you use.	lists, links, images	Build along: a mango lassi recipe page
3	**CSS colours, fonts and boxes** Style a web page with CSS rules for colours, fonts, padding, borders and margins.	CSS rules, box model	Build along: a Diwali mela notice
4	**Project: fan page or club page** Plan, build and check a three-section fan page or school club page that uses headings, lists, a picture, a link and CSS.	plan, build, check, share	Project: My fan or club page
5	**Classes, flexbox and cards** Use class selectors and flexbox to lay out a row of styled cards with gaps between them.	classes, flexbox, cards	Build along: a row of fruit cards
6	**Forms and buttons** Build an accessible form with labels, different input types and a button, without collecting personal information.	forms, labels, inputs	Build along: a book club poll
7	**First JavaScript** Use JavaScript to make a button change text and colour, and keep count with a variable.	script, events, variables	Build along: a click counter
8	**Capstone: my one-page website** Plan and build a one-page website for a local cause or mini business idea with navigation, a gallery, a form and an interactive button.	plan, build, test, launch	Project: My one-page website

Modules

Module 1 · HTML and CSS

Tags, headings, paragraphs, lists, links, images with alt text, and CSS colours, fonts and boxes. Project: a three-section fan or club page.

Big question: How does a browser turn plain text into a page that looks great?

Module 2 · Layout and interaction
Classes, flexbox card layouts, accessible forms and first JavaScript. Capstone: a one-page website for a local cause or mini business.

Big question: How do we lay out a page and make it respond to people?

Assessment

Coding challenges are checked on the server by running the learner's program. Quick checks give instant feedback. Written answers and projects are reviewed by the teacher against 4-level rubrics (Beginning · Developing · Secure · Excellent).

What you need

- Laptop or Chromebook with a modern browser (Chrome, Edge, Firefox or Safari) and a keyboard
- The built-in Kitabash Web Lab (HTML, CSS and JavaScript editor with a live preview that runs your page, no install or account needed)
- Optional: a plain text editor (Notepad, or TextEdit in plain-text mode) to save pages as .html files and play them at home in any browser
- Paper and pencil for sketching wireframes

Before you start

- None. Learners should be able to type on a keyboard and read simple English instructions.

Safety and privacy

Pages never include real personal information: use nicknames or club names only, and never put a full name, school, address, phone number, password, ID number or photo of a person on a page or in the chat. Forms in this course are practice forms that send nothing and must not ask for personal details. Pictures must be the learner's own, free placeholders or free-to-share images, always credited and always with alt text. Content must be honest and kind. Breakout rooms are supervised by the teacher. Learners under 18 use the AI tutor only with guardian consent.

What comes next

After this course: **Web Creators · Level 2 (responsive layouts, JavaScript games, publishing)**.

Kitabash original curriculum.
